# CERTIFICATION OF COMPLIANCE

FCC ID.

# P65ATRM900F01

**APPLICANT** 

# **Alien Technology Corporation**

FCC Classification : FHSS Sequence Spread Spectrum (FHSS)

Manufacturing Description: UHF RFID ReaderManufacturer: ATID CO., LtdModel name: ATUHF-F11Test Device Serial No.:: Identification

Rule Part(s) : FCC Part 15.247 Subpart C; ANSI C-63.4-2003

Frequency Range : 902.75 ~ 927.25MHz RF power : 0.82W - Conducted

Data of issue : June 13, 2011

This test report is issued under the authority of:

The test was supervised by:

Kyung-Taek LEE, Technical Manager

Hyun-Chae You, Test Engineer

This test result only responds to the tested sample. It is not allowed to copy this report even partly without the allowance of the test laboratory. This report must not be used by the applicant to claim product endorsement by any agency.

NVLAP LAB Code.: 200723-0

2-2 Manufacturer

Company name : ATID CO., Ltd

Address : 205 Migun Technoworld 1, 533, Yongsan-dong, Yuseong-gu,

Daejeon, Korea, 305-500

Tel / Fax : Tel : 82-2-544-1436 / Fax :82-2-544-1438

# **2-2 Equipment Under Test (EUT)**

Trade name : UHF RFID Reader hybrid module

FCC ID : P65ATRM900F01

Model name : ATUHF-F11
Serial number : Identification
Date of receipt : June 7, 2011

EUT condition : Pre-production, not damaged

Antenna type : Patch Antenna Max Gain 2.00dBi

Frequency Range :  $902.75 \sim 927.25 \text{MHz}$ RF output power : 0.82 W- Conducted

Number of channels : 50

Channel spacing : 500KHz

Channel Access Protocol : Frequency Hopping

Power Source : 3.7VDC by mainsystem

#### **2-3 Tested frequency**

<u>Note 1</u>: C=Complies NC=Not Complies NT=Not Tested NA=Not Applicable

*Note 2*: The data in this test report are traceable to the national or international standards.

Note 3: This device is only operated by DC

The sample was tested according to the following specification:

FCC Parts 15.247; ANSI C-63.4-2003

### → Antenna Requirement

The **Alien Technology Corporation ATUHF-F11** unit complies with the requirement of §15.203.

The antenna is connected to inside of EUT. And type is Patch antenna.

## 3.2 Transmitter requirements

#### 3.2.1 Carrier Frequency Separation

#### **Procedure:**

The carrier frequency separation was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

After the trace being stable, the reading value between the peaks of the adjacent channels using the marker-delta function was recorded as the measurement results.

#### The spectrum analyzer is set to:

Span = 1 MHz (wide enough to capture the peaks of two adjacent channels)

RBW = 10 kHz (1% of the span or more) Sweep = auto

VBW = 10 kHz Detector function = peak

Trace = max hold

#### **Measurement Data:**

| Test Results                       |          |
|------------------------------------|----------|
| Carrier Frequency Separation (KHz) | Result   |
| 499.3                              | Complies |

- See next pages for actual measured spectrum plots.

#### **Minimum Standard:**

The EUT shall have hopping channel carrier frequencies separated by a minimum of 25kHz or the 20dB bandwidth of the hopping channel, whichever is greater.

#### **Measurement Setup**

Figure 1: Measurement setup for the carrier frequency separation

# **Carrier Frequency Separation**

## 3.2.2 Number of Hopping Frequencies

#### **Procedure:**

The number of hopping frequencies was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

To get higher resolution, four frequency ranges within the 902 ~ 928 MHz FH band were examined.

#### The spectrum analyzer is set to:

Frequency range 1: Start = 900 MHz, Stop = 930 MHz

RBW = 100 kHz (1% of the span or more) Sweep = auto

 $VBW = 100 \text{ kHz} (VBW \ge RBW)$  Detector function = peak

Trace =  $\max \text{ hold}$  Span = 30MHz

#### **Measurement Data: Complies**

| <b>Total number of Hopping Channels</b> | 50 |
|---|----|
|---|----|

- See next pages for actual measured spectrum plots.

#### **Minimum Standard:**

At least 50 hopes

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

# **Number of Hopping Frequencies**

#### 3.2.3 20 dB Bandwidth

#### **Procedure:**

The bandwidth at 20 dB below the highest inband spectral density was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.

After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 20dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is ( as close as possible to ) even with the reference marker level. The marker-delta reading at this point is the 20 dB bandwidth of the emission.

#### The spectrum analyzer is set to:

Center frequency = the highest, middle and the lowest channels

Span = 200 KHz (approximately 2 or 3 times of the 20 dB bandwidth)

RBW = 3 kHz Sweep = auto

 $VBW = 3 \text{ kHz} (VBW \ge RBW)$  Detector function = peak

Trace = max hold

#### **Measurement Data:**

| Frequency | Test Results             |          |  |
|-----------|--------------------------|----------|--|
| (MHz)     | Measured Bandwidth (kHz) | Result   |  |
| 902.75    | 70.62                    | Complies |  |
| 914.75    | 70.91                    | Complies |  |
| 927.25    | 71.20                    | Complies |  |

<sup>-</sup> See next pages for actual measured spectrum plots.

| Minimum Standard: |  |  |
|-------------------|--|--|
| -                 |  |  |

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

## 20 dB Bandwidth

## **Low Channel**

#### **Mid Channel**

# **High Channel**

# 3.2.4 Time of Occupancy (Dwell Time)

#### **Procedure:**

The dwell time was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

The spectrum analyzer is set to:

Center frequency =914.75 MHz Span = zero

RBW = 100KHz  $VBW = 100KHz (VBW \ge RBW)$ 

Trace = Single SWEEP Detector function = peak

#### **Measurement Data:**

| Channel Frequency |             | Test R | Results         |          |
|-------------------|-------------|--------|-----------------|----------|
| (MHz)             | Length (ms) | number | Dwell Time (ms) | Result   |
| 914.75            | 390.58      | 1      | 390.58          | Complies |

<sup>-</sup> See next pages for actual measured spectrum plots.

#### **Minimum Standard:**

0.4 seconds within a 20 second period per any frequency

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

## 3.2.5 Transmitter Output Power

#### **Procedure:**

The peak output power was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels..

After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. The indicated level is the peak output power.

## The spectrum analyzer is set to:

Center frequency = the highest, middle and the lowest channels

Span = 5 MHz (approximately 5 times of the 20 dB bandwidth)

RBW = 1 MHz (greater than the 20dB bandwidth of the emission being measured)

 $VBW = 1 MHz (VBW \ge RBW)$ 

Detector function = peak

Trace = max hold

Sweep = auto

#### **Measurement Data:**

| Frequency | Test Results |      |          |
|-----------|--------------|------|----------|
| (MHz)     | dBm          | W    | Result   |
| 902.75    | 29.13        | 0.82 | Complies |
| 914.75    | 28.93        | 0.78 | Complies |
| 927.25    | 28.78        | 0.76 | Complies |

<sup>-</sup> See next pages for actual measured spectrum plots.

| Minimum Standard: | < 1W |
|-------------------|------|

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

# **Peak Output Power**

#### **Low Channel**

## **Mid Channel**

# **High Channel**

## 3.2.6 Band Edge

#### **Procedure:**

The bandwidth at 20dB down from the highest inband spectral density is measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.

After the trace being stable, Use the marker-to-peak function to measure 20 dB down both sides of the intentional emission.

The spectrum analyzer is set to:

Center frequency = the highest, middle and the lowest channels

RBW = 100 kHz VBW = 100 kHz

Span = 2 MHz Detector function = peak

Trace =  $\max$  hold Sweep = auto

#### **Measurement Data: Complies**

- All conducted emission in any 100kHz bandwidth outside of the spread spectrum band was at least 20dB lower than the highest inband spectral density. Therefore the applying equipment meets the requirement.
- See next pages for actual measured spectrum plots.

| Minimum Standard: | > 20 dBc |
|-------------------|----------|
|-------------------|----------|

#### **Measurement Setup**

Same as the Chapter 3.2.1 (Figure 1)

## Band - edge

# Band - edge (at 20 dB blow) – Low channel Frequency Range = $30 \text{ MHz} \sim 10^{\text{th}}$ harmonic.

# Band - edge (at 20 dB blow) – Mid channel Frequency Range = $30 \text{ MHz} \sim 10^{\text{th}}$ harmonic.

# Band - edge (at 20 dB blow) – High channel Frequency Range = $30 \text{ MHz} \sim 10^{\text{th}}$ harmonic.

## 3.2.7 Field Strength of Harmonics

#### **Procedure:**

The EUT was placed on a 0.8m high wooden table inside a shielded enclosure. An antenna was placed near the EUT and measurements of frequencies and amplitudes of field strengths were recorded for reference during final measurements. For final radiated testing, measurements were performed in OATS. Measurements were performed with the EUT oriented in 3 orthogonal axis and rotated 360 degrees to determine worst-case orientation for maximum emissions.

#### The spectrum analyzer is set to:

Center frequency = the worst channel

Frequency Range =  $30 \text{ MHz} \sim 10^{\text{th}} \text{ harmonic.}$ 

RBW = 100 kHz (  $30 \text{MHz} \sim 1 \text{ GHz}$ )

= 1 MHz  $(1 \text{ GHz} \sim 10^{\text{th}} \text{ harmonic})$ 

Span = 100 MHz

Trace = max hold

Peak mode: VBW = 1 MHz

Average mode: VBW = 10Hz

Detector function = Peak & average

Sweep = auto

#### **Measurement Data: Complies**

- See next pages for actual measured data.

#### Minimum Standard: FCC Part 15.209(a)

| Frequency (MHz) | Limit (uV/m) @ 3m |  |  |  |
|-----------------|-------------------|--|--|--|
| 30 ~ 88         | 100 **            |  |  |  |
| 88 ~ 216        | 150 **            |  |  |  |
| 216 ~ 960       | 200 **            |  |  |  |
| Above 960       | 500               |  |  |  |

<sup>\*\*</sup> Except as provided in 15.209(g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72 MHz, 76-88MHz, 174-216MHz or 470-806MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g. 15.231 and 15.241.

#### **Measurement Data:**

No other emissions were detected at a level greater than 20dB below limit.

#### Radiated Emissions - RFID mode

243 Jubug-ri, yangji-Myeon, Youngin-si, Gyeonggi-do 449-822 Korea Tel:+82-31-3236008,9 Fax:+82-31-3236010

EUT/Model No.: ATUHF-F11 TEST MODE: RFID mode

Temp Humi : 21'C / 52% Tested by: PARK.H.W

Remarks: C.F (Correction Factor) = Antenna factor + Cable loss - Preamp gain

#### 3.2.8 AC Conducted Emissions

#### **Procedure:**

The conducted emissions are measured in the shielded room with a spectrum analyzer in peak hold. While the measurement, EUT had its hopping function disabled at the middle channels in line with Section 15.31(m). Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation and Exerciser operation. The highest emissions relative to the limit are listed.

#### **Measurement Data:**

**Not Applicable (-This product is operated by DC)** 

#### Minimum Standard: FCC Part 15.207(a)/EN 55022

| Frequency Range | Conducted I | Limit (dBuV) |  |  |
|-----------------|-------------|--------------|--|--|
| (MHz)           | Quasi-Peak  | Average      |  |  |
| 0.15 ~ 0.5      | 66 to 56 *  | 56 to 46 *   |  |  |
| 0.5 ~ 5         | 56          | 46           |  |  |
| 5~30            | 60          | 50           |  |  |

<sup>\*</sup> Decreases with the logarithm of the frequency
