

Shown is an image of the label created in LabelView (8.0) for illustration purposes. LabelView is a serial number & bar code sequencing program.

Do not move the location of the data fields. The data fields: Group Code ("IRFPRX"); Beacon "10B" rate and model number parameters "A760-0000-000-04T" will not change. Serial ID field ("00000001") must be changed based on the Customer data for the order. Data to be provided with part order or as a modified label template file.

Some printers require adjustments to the top and left margins when printing due to internal offsets. Darkness may also need adjusting. Logo shown for illustration only- may vary. See BOM for additional notes.
