ATTN: Authorization & Evaluation Division

RE: FCC ID: P7QRHV-1

The above referenced item complies with 47 CFR 22.919 as follows:

The Electronic Serial Number (ESN) for each transceiver is unique.

The ESN host component is permanently attached to a main circuit board of the mobile transmitter and the integrity of the unit's operating software is not alterable. The ESN is isolated from fraudulent contact and tampering.

The host component does not contain other information, it is not removable and its electrical connections are not accessible.

The ESN is factory set and is not alterable, transferable, removable, or otherwise able to be manipulated. Cellular mobile equipment is designed such that any attempted to remove, tamper with, or change the ESN chip, its logic system, or firmware originally programmed by the manufacturer will render the mobile transmitter inoperative.

Sincerely,

Mark G. Pope, Certification and Compliance Manager
