RE: Certification Application
FCC ID: P82-53223-RTM

Please be advised that the following information is to be held confidential on behalf of BancTec :

- RFID System Assembly, Model 853223

The application contains technical information which BancTec deems to be trade secrets and proprietary. If made public, the information might be used to the disadvantage of the applicant in the market place.

Thank you for your attention to this matter.

Sincerely,

Robert Moeller
Compliance Engineer

Re: FCC ID No.: P82-53223-RTM
Applicant: BancTec Inc. in behalf of Texas Instruments
Filed: April 2002

Dear Sir or Madam:

Request for Confidential Treatment

Texas Instruments Incorporated ("TI") requests that the materials described below be withheld from public disclosure in accordance with Section 0.459 of the Commission's Rules, 47 C.F.R. § 0.459 (2000), following grant of the application. In support of this request, TI submits the following:

(1) identification of the specific information for which confidential treatment is sought:

Electrical Schematics for TI PN # RI-STU-TRDC-02), TINDA_TRDC_Schematics.pdf, (4 pages)
Bill of Materials for TI PN # RI-STU-TRDC-02), TINDA_TRDC_BOM.pdf (2 pages)

(2) identification of the Commission proceeding in which the information was submitted or a description of the circumstances giving rise to the submission:

The proceeding is that involving the applications for equipment authorization (certification) and was previously under FCC ID No.: P82-53223-RTM.

(3) explanation of the degree to which the information is commercial or financial, or contains a trade secret or is privileged:

This material includes circuit diagrams (schematics) and parts list (BOM). The material also discloses a confidential business relationship. As such, this material is treated as highly "confidential commercial information" as the term is used in 5 U.S.C. § 552(b)(4).

(4) explanation of the degree to which the information concerns a service that is subject to competition:

The material for which confidentiality is sought is employed in the design and manufacture of radio frequency identification equipment that is offered on a highly competitive basis. Customers for this equipment have a variety of competing sources of supply.

(5) explanation of how disclosure of the information could result in substantial competitive harm:

Disclosure would, in effect, give away the fruits of the labors of TI personnel, who have worked to bring this equipment to market. Disclosure would also offer competitors additional unwarranted insight into the product development process thereby allowing such competitors an advantage that would not be available to TI.

(6) identification of any measures taken by the submitting party to prevent unauthorized disclosure:

The information for which confidential treatment is sought is kept confidential by TI and not made available to third parties except pursuant to non-disclosure agreements.

(7) identification of whether the information is available to the public and the extent of any previous disclosure of the information to third parties:

To the knowledge of those preparing this application, the information for which confidentiality is requested has not been disclosed publicly heretofore. While the general theory of operation of this RF ID equipment has been the subject of numerous disclosures in industry and standards groups as well as in rule making proceedings at the FCC, the protection sought is narrowly drawn and pertains to certain specific implementations of RFID technology.

(8) justification of the period during which the submitting party asserts that material should not be available for public disclosure:

This material should not be disclosed for at least 5 years. While improvements in design are made relatively frequently, disclosure of the design information would lead to insights into both designs and the process of product development and could have an adverse competitive effect for many years to come. This equipment is designed for commercial, industrial, and governmental transportation applications. Moreover, this equipment will be used in revenue collection applications and secure access applications involving access to locations and machinery. As such, it is important that its design and related confidential details not be made available to unauthorized persons who might attempt to use such knowledge to compromise the applications for which the equipment will be employed.

(9) any other information that the party seeking confidential treatment believes may be useful in assessing whether its request for confidentiality should be granted:

See item 8 above. Note that the equipment for which approval is being sought will be employed in applications that inherently carry a premium on security.

Should you have any questions regarding the matters addressed herein, please do not hesitate to contact me at (214) 567-2523 (r-roebuck@ti.com).

Respectfully submitted,

By: /s/ Randal D. Roebuck
