

Equipment : Bluetooth Low Energy Dongle

Brand Name : CC&C

Model No. : BT-420

FCC ID : PANBT420

Standard : 47 CFR FCC Part 15.247 Operating Band : 2400 MHz – 2483.5 MHz

FCC Classification: DTS

Applicant : CC&C Technologies, Inc.

Manufacturer 8F, No.150, Jian Yi Rd, Zhonghe District,

New Taipei City, 235, Taiwan

The product sample received on Mar. 10, 2014 and completely tested on Mar. 14, 2014. We, SPORTON, would like to declare that the tested sample has been evaluated in accordance with the procedures given in ANSI C63.10-2009 and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

1 General Description

1.1 Information

1.1.1 Product Details

The equipment is Bluetooth Low Energy Dongle. There are two types of Balan Filter. The only difference is the source. For more detailed features description, please refer to the manufacturer's specifications or user's manual.

Report No.: FR422023

1.1.2 RF General Information

Report No.: FR422023

Note 1: Test distance for frequencies at or above 30 MHz, measurements may be performed at a distance other than the limit distance provided they are not performed in the near field and the emissions to be measured can be detected by the measurement equipment. When performing measurements at a distance other than that specified, the results shall be extrapolated to the specified distance using an extrapolation factor of 20 dB/decade (inverse of linear distance for field-strength measurements, inverse of linear distance-squared for power-density measurements).

Note 2: Test distance for frequencies at below 30 MHz, measurements may be performed at a distance closer than the EUT limit distance; however, an attempt should be made to avoid making measurements in the near field. When performing measurements below 30 MHz at a closer distance than the limit distance, the results shall be extrapolated to the specified distance by either making measurements at a minimum of two or more distances on at least one radial to determine the proper extrapolation factor or by using the square of an inverse linear distance extrapolation factor (40 dB/decade). The test report shall specify the extrapolation method used to determine compliance of the EUT.

| Un-restricted Band Emissions Limit | | | | | | | | |

| RF output power procedure | Limit (dB) | | | | | | | |
| Peak output power procedure | 20 | | | | | | | |
| Average output power procedure | 30 | | | | | | | |

Note 1: If the peak output power procedure is used to measure the fundamental emission power to demonstrate compliance to requirements, then the peak conducted output power measured within any 100 kHz outside the authorized frequency band shall be attenuated by at least 20 dB relative to the maximum measured in-band peak PSD level.

Note 2: If the average output power procedure is used to measure the fundamental emission power to demonstrate compliance to requirements, then the power in any 100 kHz outside of the authorized frequency band shall be attenuated by at least 30 dB relative to the maximum measured in-band average PSD level.

- Note 2: Measurement receive antenna polarization: H (Horizontal), V (Vertical)
- Note 3: For restricted bands, the peak measurement is fully sufficient, as the max field strength as measured with the Peak-Detector meets the AV-Limit so that the AV level does not need to be reported in addition.
- Note 4: For un-restricted bands, unwanted emissions shall be attenuated by at least 20 dB relative to the maximum measured in-band level (89.16 dBuV/m).
- Note 5: Average emission setting: RBW=1MHz; VBW ≥ 1/T, where T is "Pulse On Time", e.g., LE VBW≥1/625us. VBW=3kHz.
- Note 6: No level of unwanted emissions exceeds the level of the fundamental emission.
