

## **Response for CC&C**

1. ok.
2. Please see attached test result comparison.
3. We have searched the frequency range up to 25GHz
4. Yes, I have asked Linda re-submit RF exposure exhibition to your web site.
5. Our first test for the product is the carrier power strength which will be used on the bandedge emission. Then we will connect the Notch filter and amplifier for the spurious in case the amplifier being saturated. That is why we will have no carrier frequency on the plot.
