IKOMA TESTING LABORATORY 12128 TAKAYAMA-CHO IKOMA-CITY NARA 630-0101 JAPAN

TEST REPORT

Report No. A-005-07-C

Date: 26 April 2007

This test report is to certify that the tested device properly complies with the requirements of:

FCC Rules and Regulations Part 15 Subpart C Intentional Radiators.

All the tests necessary to show compliance to the requirements were performed and these results met the specifications of requirement. The results of this report should not be construed to imply compliance of equipment other than that, which was tested. Unless the laboratory permission, this report should not be copied in part.

1. Applicant

Company Name	: Pacific Industrial Co., Ltd. TPMS DIV.
Mailing Address	: Godo-cho, Ampachi, GIFU, 503-2397 Japan

2. Identification of Tested Device

chillication of restea D	evice
Type of Device	: Transmitter
Kind of Equipment Au	thorization : \Box DoC \boxtimes Certification \Box Verification
FCC ID	: PAXPMV108P
Device Name	: Tire Pressure Monitoring System Transmitter
Trade Name	: PACIFIC
Model Number	: PMV-108P
Serial Number	: 01
	\Box Production \Box Pre-production \boxtimes Prototype
Date of Manufacture	: April 2007

3. Test Items and Procedure

- □ AC Power Line Conducted Emission Measurement
- Radiated Emission Measurement
- 🖾 Emission Bandwidth Measurement

4. Date of Test

Receipt of Test Sample	: 1	l 6 April 2007				
Condition of Test Sampl	e : [🛛 Damage is not	t found on th	e set.		
	[Damage is for	and on the se	t. (Details a	are describe	d in this report)
Test Completed on	: 2	23 April 2007		9	7	• ,

Seiichi Izumi General Manager / Ikoma Testing Laboratory

0. LABORATORY ACCREDITATION AND MEASUREMENT UNCERTAINTY

0.1. Laboratory Accreditation

KEC is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) for the specific scope of accreditation under Lab Code: 200207-0.

When the test report concerns with the NVLAP accreditation test, the first page of the test report is signed by NVLAP Approved Signatory accompanied by the NVLAP logo.

The report must not be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government.

0.2. Measurement Uncertainty

The result of a measurement is only an approximation or estimate of the value of a specific quantity. And thus the measurand is complete only when a statement of uncertainty is given. KEC quotes Measurement Uncertainty (U)

of +/- 4.9dB for Radiated Emissions and of +/- 2.2dB for Conducted Emissions.

1. CERTIFICATION OF THE COMPLIANCE

This test report is to certify that the tested device properly complies with the requirements of FCC Rules and Regulations Part 15 Subpart C Intentional Radiators.

2. GENERAL INFORMATION

2.1. Product Description

The PACIFIC Model No.: PMV-108P (referred to as the EUT in this report) is a Tire Pressure Monitoring System Transmitter for cars.

1) Technical Specifications

Operating frequency range	: 314.98MHz
Type of antenna	: Internal Antenna
Type of Emission	: F2D
Antenna	: Built-in type
2) Contained Oscillators SAW	: 314.98MHz
3) Rated Power Supply	: DC3V (Lithium battery)

2.2. Description for Equipment Authorization

(1) Type of device	: 🛛 Intentional Radiators
(2) Reference Rule and Specification	 FCC Rule Part 15 Subpart C, Section 15.231 Periodic operation in the band 40.66 – 40.70MHz and above 70MHz □ Section 15.207 ⊠ Section 15.209 ⊠ Section 15.231 (c) ⊠ Section 15.231 (e)
(3) Kind of Equipment Authorization	: \Box DoC \boxtimes Certification \Box Verification
(4) Procedure of Application	: 🛛 Original Equipment 🗌 Modification
(5) Highest Frequency used in the Device	e: 314.98MHz
(6) Upper Frequency of Radiated Emission	on Measurement Range : □ 1000MHz □ 2000MHz □ 5000MHz ⊠ Tenth harmonics of the highest fundamental frequency

2.3. Test Facility

All tests described	in this report were performed by:			
Name:	KANSAI ELECTRONIC INDUSTRY DEVELOPMENT CENTER (KEC) IKOMA TESTING LABORATORY			
	Open Area Test SiteNo.1No.4Anechoic ChamberNo.1No.3Shielded RoomNo.1No.2No.4			
Address:	12128, Takayama-cho Ikoma-city, Nara, 630-0101 Japan			
The KEC has been Also the laboratory criteria for testing EMC M.C. Anecl	s have been filed with the FCC under the criteria of ANSI C63.4-2003. accredited by the NVLAP (Lab. Code: 200207-0) based on ISO/IEC 17025. y has been authorized by TUV SUD JAPAN and TUV Rheinland Japan based on their laboratory (ISO/IEC 17025). hoic Chamber No.3 has been filed with the Industry Canada under the criteria of File number : IC4149-3)			

3. TESTED SYSTEM

3.1. Test Mode

Continuously transmitted mode.

[Note]

The EUT was operated continuously in measurement. In the measurement of radiated emission. The EUT was placed horizontally or vertically on the test table.

The data of operation modes that produce the maximum emission were reported at each frequency.

3.2. Characteristics of transmitting train

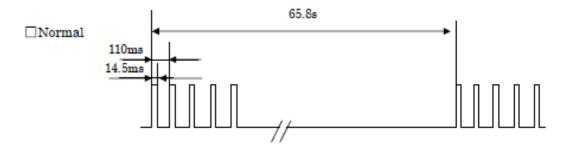

Figure 1. normal transmission

[Note]

The above information was declared by applicant.

4. RADIATED EMISSION MEASUREMENT

4.1. Test Procedure

(1)		in accordance with ANSI C63.4-2003 section 8.						
	i without deviation, i with deviation (details are found below) See also the block diagram and the photographs of EUT System configuration in this report.							
(2)	If the EUT system is connected to a public power network, all power cords for the EUT System are							
~ /	connected the receptacle on the turntable.							
(3)	Warm up the EUT System.							
(4)		nd run the prepared software for the test, if necessary.						
(5)	closer distance than that sp the broad band antenna.	of the EUT System, preliminary radiated measurement are performed at a ecified for final radiated measurement using the spectrum analyzer (*1) and						
(5)		Hz, it is performed using the spectrum analyzer (*2) and the horn antenna.						
(6)		n condition, which produces the maximum emission, the configuration of of the cables, and the operation mode, are changed under normal usage of						
(7)		l from 30MHz to the upper frequency of measurement range, and collect						
		inimum on the spectrum analyzer relative to the limits in the whole range.						
(8)		he six highest emissions minimum, recorded above, are measured at the						
	specified distance using the	broad band antenna or the tuned dipole antenna and the test receiver (*3).						
		Hz, the measurements are performed by the horn antenna and						
	\Box the test receive							
	\boxtimes the spectrum and	nalyzer (*2) with pre-amplifier.

Test data in Graph

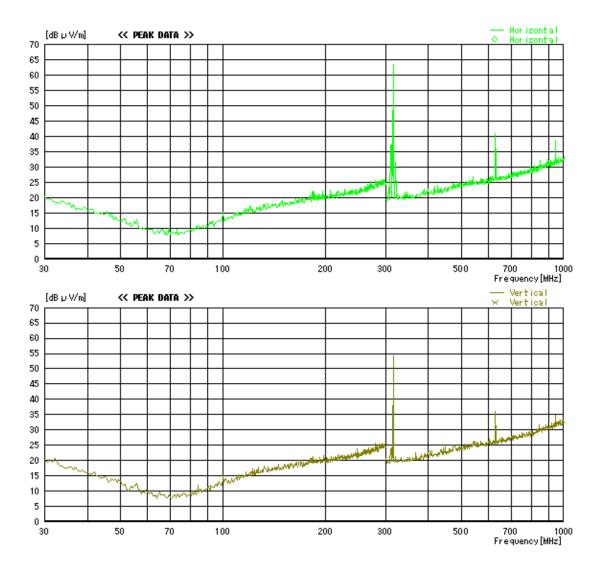

Figure 2. 30 – 1000MHz spectrum chart

[Note]

This spectrum chart is the result of Exploratory radiated emission measurement by using the spectrum analyzer. The result of Final radiated emission measurement is shown in the table of previous page.

[Remark]
(*1): Antenna Factor includes the cable loss, above 1GHz, antenna factor includes both of the
cable loss and pre-amplifier gain.
(*2): Conversion Factor, See figure 1 and See Page 14, Calculation of Conversion Factor (Peak
detector to Average).
(*3) : If the measurement value with the peak detector meets the average limits, the measurement
with average detector is omitted.
In FCC rule, the limit of measurement of radiated emission above 1GHz is regulated on the
average value. Therefore, the average value above 1GHz was determined by using a reduced the video bandwidth of spectrum analyzer to obtain the average value in this case spectrum
analyzer set up condition.
Resolution Bandwidth : 1MHz
Video Bandwidth : 30Hz
Detector function : Peak detector
[Note]
(1) * mark in Measured Frequency : Measured with the tuned dipole antenna.
No mark in Measured Frequency : Measured with the broadband antenna.
(2) All emission not reported were less than $10dB\mu V$ at meter reading.
· · · ·
[Calculation method]
Maximum Field Strength (dBµV/m)
= Meter Reading (at maximum level of Horizontal or Vertical) (dBµV) + Antenna Factor (dB/m)
[Calculation of Limit (Average detector)]
<u>Fundamental</u>
$L = 20\log (16.667 \times F - 2833.333)$ Where, L: Limit [dB μ V/m], F: Frequency [MHz]
$L = 67.7 [dB\mu V/m]$ at $F = 314.98 [MHz]$
Spurious Emission
$L = 67.7 - 20 = 47.7 \ [dB\mu V/m]$
Above 1000MHz, the limit is replaced at $54 dB \mu V/m$.

[Environment]

Temperature: 23 °C

Humidity: 31 %

[Tested Date / Tester] 18 April 2007

[Calculation of Conversion Factor (Peak detector to Average)] In accordance with ANSI C63.4-2003 section 13.1.4.2, The EUT's transmitting pulse modulated emissions, therefore the average level of emissions are found by measuring peak level of the emission and correcting them with the duty cycle.

From Figure 1.

The value of the sum of the pulse widths in one period : 14.5 [msec]

The length of the period : 100.0 [msec]

As the EUT pulse train exceeds 100ms, calculate the duty cycle by averaging the sum of the pulse widths over the width with the highest average value.

Then, Conversion Factor PEAK to AVERAGE is calculated as follows.

Conversion Factor

 $(dB) = 20Log (Duty cycle) = 20Log \qquad \frac{14.5 [msec]}{100.0 [msec]}$

PEAK to AVERAGE

= -16.7 (dB)

Duty cycle = $\frac{\text{The value of the sum of the pulse widths in one period } \sum_{n=1}^{n} t_n}{\text{The length of period (T)}}$

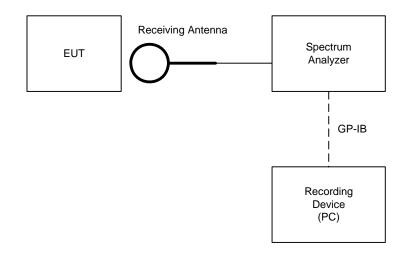

[Sample Calculation at conversion Peak to Average]

Field Strength ($dB\mu V/m$)

= Meter Reading (at Maximum level of horizontal or vertical) ($dB\mu V$) + Antenna Factor (dB/m) + Conversion Factor (dB)

5. EMISSION BANDWIDTH MEASUREMENT

5.1. Test Configuration

5.2. Test Results

Measured emission bandwidth = 352.065kHz See next Figure 3 (the picture of spectrum analyzer)

[Note]

Emission Bandwidth was determined at the points 20dB down from the modulated carrier.

Spectrum Analyzer Setting:	
Center Frequency	= 314.98MHz
Frequency Span	= 500 kHz/div.
Resolution Bandwidth	= 100kHz
Video Bandwidth	= 100 kHz

[Environment]

Temperature: 23 °C

Humidity: 31 %

[Calculation of Limit]

Limit of Emission bandwidth = $314.98MHz \times 0.25\% = 787.45kHz$

6. USED TEST EQUIPMENTS AND CALIBRATION STATUS

Note : We check the performance, before using this device.

The overall program of calibration and verification of equipment is designed and operated so as to ensure that measurements made by KEC are traceable to national standards of measurement or equivalent abroad.
