

# **RADIO TEST REPORT**

# Test Report No. 14976710H

| Customer            | Pacific Industrial Company, LTD.                   |
|---------------------|--|
| Description of EUT  | TPMS (Tire Pressure Monitoring System Transmitter) |
| Model Number of EUT | PMV-E005   |
| FCC ID              | PAXPMVE005A  |
| Test Regulation     | FCC Part 15 Subpart C                              |
| Test Result         | Complied   |
| Issue Date          | October 11, 2023                                   |
| Remarks             | -  |

| Representative test engineer   | Approved by   |
|--|---|
| 76. Furntaka   | S. Mijazono   |
| Hiroyuki Furutaka<br>Engineer  | Shinichi Miyazono<br>Engineer                           |
|  | CERTIFICATE 5107.02                                     |
| The testing in which "Non-accreditation" is displayed.  There is no testing item of "Non-accreditation". | I is outside the accreditation scopes in UL Japan, Inc. |

Test Report No. 14976710H Page 2 of 25

## **ANNOUNCEMENT**

- This test report shall not be reproduced in full or partial, without the written approval of UL Japan, Inc.
- The results in this report apply only to the sample tested. (Laboratory was not involved in sampling.)
- This sample tested is in compliance with the limits of the above regulation.
- The test results in this test report are traceable to the national or international standards.
- This test report must not be used by the customer to claim product certification, approval, or endorsement by the A2LA accreditation body.
- This test report covers Radio technical requirements. It does not cover administrative issues such as Manual or non-Radio test related Requirements. (if applicable)
- The all test items in this test report are conducted by UL Japan, Inc. Ise EMC Lab.
- The opinions and the interpretations to the result of the description in this report are outside scopes where UL Japan, Inc. has been accredited.
- The information provided from the customer for this report is identified in SECTION 1.
- For test report(s) referred in this report, the latest version (including any revisions) is always referred.

## **REVISION HISTORY**

## Original Test Report No. 14976710H

## **SECTION 1: Customer Information**

| Company Name   | Pacific Industrial Company, LTD. |
|--|----------------------------------|
| Address 1300-1, Yokoi, Godo-cho, Anpachi-gun, Gifu 503-2397, Japan |                                  |
| Telephone Number   | +81-584-28-0113                  |
| Contact Person   | Takashi Takeyama                 |

The information provided from the customer is as follows;

- Customer, Description of EUT, Model Number of EUT, FCC ID on the cover and other relevant pages
- Operating/Test Mode(s) (Mode(s)) on all the relevant pages
- SECTION 1: Customer Information
- SECTION 2: Equipment Under Test (EUT) other than the Receipt Date and Test Date
- SECTION 4: Operation of EUT during testing
- \* The laboratory is exempted from liability of any test results affected from the above information in SECTION 2 and 4.

## **SECTION 2: Equipment Under Test (EUT)**

#### 2.1 Identification of EUT

| Description   | TPMS (Tire Pressure Monitoring System Transmitter)                |  |
|---------------|---|--|
| Model Number  | PMV-E005  |  |
| Serial Number | Refer to SECTION 4.2  |  |
| Condition     | Production prototype  |  |
|               | (Not for Sale: This sample is equivalent to mass-produced items.) |  |
| Modification  | No Modification by the test lab                                   |  |
| Receipt Date  | September 20, 2023  |  |
| Test Date     | September 21, 2023  |  |

## 2.2 Product Description

#### **General Specification**

| Rating | DC 3 V |
|--------|--------|
|        |        |

#### **Radio Specification**

| Equipment Type         | Transmitter |
|------------------------|-------------|
| Frequency of Operation | 315 MHz     |
| Type of Modulation     | FSK         |

Test Report No. 14976710H Page 6 of 25

## **SECTION 3: Test Specification, Procedures & Results**

#### 3.1 Test Specification

| Test Specification | FCC Part 15 Subpart C   |
|--------------------|---|
|                    | The latest version on the first day of the testing period   |
| Title              | FCC 47CFR Part15 Radio Frequency Device Subpart C Intentional Radiators Section 15.231 Periodic operation in the band 40.66-40.70 MHz and above |
|                    | 70 MHz.   |

#### 3.2 Procedures and Results

| Item             | Test Procedure          | Specification                 | Worst margin   | Results  | Remarks  |
|------------------|-------------------------|-------------------------------|----------------|----------|----------|
| Conducted        | FCC: ANSI C63.10:2013   | FCC: Section 15.207           | N/A            | N/A      | *1)      |
| emission         | 6 Standard test methods |                               |                |          |          |
|                  |                         |                               |                |          |          |
|                  | ISED: RSS-Gen 8.8       | ISED: RSS-Gen 8.8             |                |          |          |
| Automatically    | FCC: ANSI C63.10:2013   | FCC: Section                  | N/A            | Complied | Radiated |
| Deactivate       | 6 Standard test methods | 15.231(a)(2)                  |                |          |          |

|                  |                         | RSS-Gen 8.9                   |                |          |          |
| -20 dB Bandwidth | FCC: ANSI C63.10:2013   | <b>FCC:</b> Section 15.231(c) | N/A            | Complied | Radiated |
|                  | 6 Standard test methods |                               |                |          |          |
|                  |                         |                               |                |          |          |
|                  | ISED: -                 | ISED: Reference data          |                |          |          |

Note: UL Japan, Inc.'s EMI Work Procedures: Work Instructions-ULID-003591 and Work Instructions-ULID-003593. \*1) The test is not applicable since the EUT does not have AC Mains.

#### FCC Part 15.31 (e)

The test was performed with the New Battery during the tests.

Therefore, this EUT complies with the requirement.

#### FCC Part 15.203 Antenna requirement

It is impossible for end users to replace the antenna, because the antenna is mounted inside of the EUT. Therefore, the equipment complies with the antenna requirement of Section 15.203.

#### 3.3 Addition to Standard

| Item   | Test Procedure          | Specification  | Worst margin | Results | Remarks  |
|--|-------------------------|----------------|--------------|---------|----------|
| 99% emission   | ANSI C63.10:2013        | Reference data | N/A          | -       | Radiated |
| bandwidth  | 6 Standard test methods |                |              |         |          |
| Note: UL Japan, Inc.'s EMI Work Procedures: Work Instructions-ULID-003591 and Work Instructions-ULID-003593. |                         |                |              |         |          |

#### 3.4 Uncertainty

Measurement uncertainty is not taken into account when stating conformity with a specified requirement. Note: When margins obtained from test results are less than the measurement uncertainty, the test results may exceed the limit.

The following uncertainties have been calculated to provide a confidence level of 95 % using a coverage factor k = 2.

Radiated emission

| Measurement distance | Frequency Range     | Unit       | Calculated Uncertainty (+/-) |     |
|----------------------|---------------------|------------|------------------------------|-----|
| 3 m                  | 9 kHz to 30 MHz     |            | dB                           | 3.3 |
| 10 m                 |                     |            | dB                           | 3.1 |
| 3 m                  | 30 MHz to 200 MHz   | Horizontal | dB                           | 4.8 |
|                      |                     | Vertical   | dB                           | 5.0 |
|                      | 200 MHz to 1000 MHz | Horizontal | dB                           | 5.1 |
|                      |                     | Vertical   | dB                           | 6.2 |
| 10 m                 | 30 MHz to 200 MHz   | Horizontal | dB                           | 4.8 |
|                      |                     | Vertical   | dB                           | 4.8 |
|                      | 200 MHz to 1000 MHz | Horizontal | dB                           | 4.9 |
|                      |                     | Vertical   | dB                           | 5.0 |
| 3 m                  | 1 GHz to 6 GHz      | dB         | 4.9                          |     |
|                      | 6 GHz to 18 GHz     | dB         | 5.2                          |     |
| 1 m                  | 10 GHz to 26.5 GHz  |            | dB                           | 5.5 |

## 3.6 Test Data, Test Instruments, and Test Set Up

Refer to APPENDIX.

Test Report No. 14976710H Page 9 of 25

## **SECTION 4: Operation of EUT during testing**

## 4.1 Operating Mode(s)

| Test mode  | Remarks  |  |  |  |  |
|--|--|--|--|--|--|
| 1) Rotating mode 1   | Automatically Deactivate                               |  |  |  |  |
| 2) Rotating mode 2   |  |  |  |  |  |
| 3) Stationary mode   |  |  |  |  |  |
| 4) Pressure alert 1  |  |  |  |  |  |
| 5) Pressure alert 2  |  |  |  |  |  |
| 6) High temperature alert  |  |  |  |  |  |
| Transmitting mode (Tx 315.00 MHz) *1)      * The system was configured in typical fashion (as     *Power of the EUT was set by the software as followed software:      PMV-E005 Version: 1.1 | ows;   |  |  |  |  |
| (Date: 2023.09.21, Storage location: EUT memory)   |  |  |  |  |  |
| *This setting of software is the worst case.   |  |  |  |  |  |
| Any conditions under the normal use do not excee   |  |  |  |  |  |
| In addition, end users cannot change the settings  |  |  |  |  |  |
| Justification: The system was configured in typical  | fashion (as a user would normally use it) for testing. |  |  |  |  |

<sup>\*1)</sup> The software of this mode is the same as one of normal product, except that EUT continues to transmit.

## 4.2 Configuration and Peripherals

Α

**Description of EUT** 

| No. | Item                      | Model number | Serial Number | Manufacturer       | Remark |
|-----|---------------------------|--------------|---------------|--------------------|--------|
| Α   | TPMS                      | PMV-E005     | 000582F *1)   | Pacific Industrial | EUT    |
|     | (Tire Pressure Monitoring |              | 5831 *2)      | Company, LTD.      |        |
|     | System Transmitter)       |              |               |                    |        |

<sup>\*1)</sup> Used for Radiated Emission test

<sup>\*</sup> Setup was taken into consideration and test data was taken under worse case conditions.

<sup>\*2)</sup> Used for Antenna Terminal Conducted test

Test Report No. 14976710H Page 10 of 25

#### **SECTION 5: Radiated Spurious Emission**

#### **Test Procedure**

[For below 30 MHz]

The noise level was checked by moving a search-coil (Loop Antenna) close to the EUT.

#### [For 30 MHz to 1 GHz]

EUT was placed on a urethane platform of nominal size, 1.0 m by 1.5 m, raised 0.8 m above the conducting ground plane.

The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with a ground plane.

#### [For above 1 GHz]

EUT was placed on a urethane platform of nominal size, 0.5 m by 0.5 m, raised 1.5 m above the conducting ground plane.

The Radiated Electric Field Strength has been measured in a Semi Anechoic Chamber with absorbent materials lined on a ground plane.

The measuring antenna height was varied between 1 and 4 m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field strength.

Test antenna was aimed at the EUT for receiving the maximum signal and always kept within the illumination area of the 3 dB beamwidth of the antenna.

The measurements were performed for both vertical and horizontal antenna polarization.

The radiated emission measurements were made with the following detector function of the test receiver / spectrum analyzer.

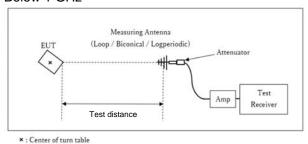

#### Test Antennas are used as below;

| Frequency    | Below 30 MHz | 30 MHz to 200 MHz | 200 MHz to 1 GHz | Above 1 GHz |
|--------------|--------------|-------------------|------------------|-------------|
| Antenna Type | Loop         | Biconical         | Logperiodic      | Horn        |

| Frequency     | From 9 kHz<br>to 90 kHz<br>and<br>From 110 kHz<br>to 150 kHz | From<br>90 kHz<br>to 110 kHz | From<br>150 kHz<br>to 490 kHz | From<br>490 kHz<br>to 30 MHz | From<br>30 MHz<br>to 1 GHz           | Above 1 GHz                        |
|---------------|--|------------------------------|-------------------------------|------------------------------|--------------------------------------|------------------------------------|

Test Report No. 14976710H Page 11 of 25

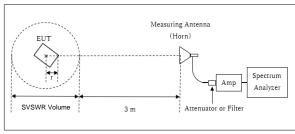

#### [Test Setup] Below 1 GHz

Test Distance: 3 m

SVSWR Volume: 1.5 m

#### 1 GHz to 3.2 GHz

- CISPR 16-1-4.)
  - r = 0.0 m

- r : Radius of an outer periphery of EUT
- ×: Center of turn table

\* The test was performed with r = 0.0 m since EUT is small and it was the rather conservative condition.

Distance Factor:  $20 \times \log (4.0 \text{ m} / 3.0 \text{ m}) = 2.50 \text{ dB}$ \* Test Distance: (3 + SVSWR Volume /2) - r = 4.0 m

(SVSWR Volume has been calibrated based on

- The carrier level and noise levels were confirmed at each position of X, Y and Z axes of EUT to see the position of maximum noise, and the test was made at the position that has the maximum noise.

The test results and limit are rounded off to one decimal place, so some differences might be observed.

: 9 kHz to 3.2 GHz Measurement range

Test data : APPENDIX

**Test result** : Pass

#### Sample Calculation:

Conducted Power Result = Reading + Cable Loss + Atten. Loss

The measurement of Burst Power used Gate function.

<sup>\*</sup>Since Burst Power is higher than Time Average Power, the test was performed at Burst Power to be more conservative.

#### Sample calculation:

Result of PK = Reading + Ant Factor + Loss {Cable + Attenuator + Filter (above 1 GHz) + Distance factor (above 1 GHz)} - Gain (Amplifier)

Result of PK with Duty factor (PK / W) = Reading + Ant Factor + Loss {Cable + Attenuator + Filter (above 1 GHz) + Distance factor (above 1 GHz)} - Gain (Amplifier) + Duty factor (Refer to Duty cycle data sheet)

For above 1 GHz: Distance Factor: 20 x log (4.0 m/3.0 m) = 2.50 dB

If Gain 0.0 dB shown in the above table, pre-amplifier was not used to avoid the influence of carrier power. The pre-amplifier used for carrier frequency measurement was not saturated.

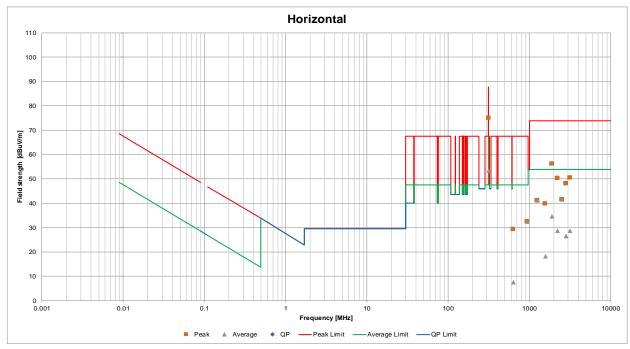

<sup>\*</sup>Other frequency noises omitted in this report were not seen or had enough margin (more than 20 dB).

|--------------|------------|-------|--------------------|--------------------|--|
| Туре         | Type Times |       | ON time(in 100 ms) | ON time(in 100 ms) |  |
|              |            | [ms]  | [ms]               | [ms]               |  |
| A            | 1          | 8.213 | 8.213              | 8.213              |  |

ON time(in 100 ms) = Times \* ON time(One pulse)

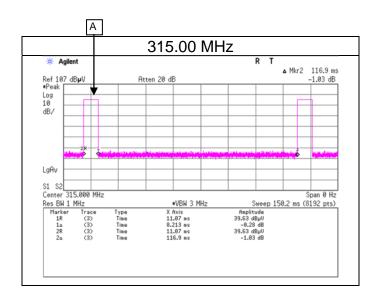

(Total)

|         | (1 otal) |       |                 |       |
|---------|----------|-------|-----------------|-------|
| ON time |          | Cycle | Duty            | Duty  |
|         | [ms]     | [ms]  | (On time/Cycle) | [dB]  |
|         | 8.213    | 100   | 0.0821          | -21.7 |

ON time[ms] = Type A's On Time(in 100 ms)

Duty = 20 \* log10(ON time/Cycle)

\* "Timing of transmission" of the application documents was referred, since Intentional off time was unrealizable in measurement circumstance.

The ON time (8.213 ms) appears 1 times in 100 ms.

The actual measurement value was applied as Averaging factor (Duty factor).

<sup>\*</sup>Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

#### Test item:

**RE: Radiated Emission** 

**AT: Antenna Terminal Conducted**
