STATEMENT OF QUALIFICATIONS

for

Chad M. Beattie

Washington Laboratories, Ltd.

I am a NARTE-Accredited EMC Test Laboratory Engineer with an Associates in Electronic Systems Technology. I have nine years of electronics experience, the last five years being directly involved in EMI testing. I am qualified to perform EMC testing to the methods described in this test report. The measurements taken within this report are accurate within my ability to perform the tests and within the tolerance of the measuring instrumentation.

FCC CERTIFICATION TEST REPORT

for

FCC ID: PB8P4432-051

1.0 Introduction

This report has been prepared on behalf of Dassault A.T. to support the attached Application for Equipment Authorization. The test and application are submitted for a portable Electronic Fund Transfer (EFT)/ P.O.S. Terminal containing an internal CDPD Modem Module Transmitter under Part 22 of the FCC Rules and Regulations. The Equipment Under Test was the Dassault A.T. *ARTEMA US Mobile* Radio System, M/N: P4432-909 and P4432-959.

The transmitter module (CDPD Modem) has already been authorized by Novatel Wireless Technologies Ltd. under FCC ID: NBZNRM-6832. Dassault A.T. is integrating the module into the *ARTEMA US Mobile* terminal to which they are obtaining FCC Certification under the FCC ID: PB8P4432-051. The approved CDPD module has not been changed or modified.

The complete FCC Certification Test Report for the approved CDPD module (FCC ID: NBZNRM-6832) has been included as Appendix B of this test report. The Dassault A.T. *ARTEMA US Mobile* has also been evaluated for RF Exposure in accordance with FCC Rule Part 2.1093, ET Docket 96-326 Rules for mobile and portable devices. The SAR report has been included in the submission for the certification.

The AC power line conducted emissions measurements reported herein were performed according to the 1992 version of ANSI C63.4. The measurement equipment conforms to ANSI C63.2 Specifications for Electromagnetic Noise and Field Strength Instrumentation. Calibration checks are made periodically to verify proper performance of the measuring instrumentation.

The AC power line conducted emissions measurements were performed at Washington Laboratories, Ltd. test center in Gaithersburg, MD. Site description and site attenuation data have been placed on file with the FCC's Sampling and Measurements Branch at the FCC laboratory in Columbia, MD. Washington Laboratories, Ltd. has been accepted by the FCC and approved by NIST NVLAP (NVLAP Lab Code: 200066-0) as an independent FCC test laboratory.

All results reported herein relate only to the equipment tested. The measurement uncertainty of the data contained herein is ± 2.3 dB. Refer to Appendix A for Statement of Measurement Uncertainty. This report shall not be used to claim product endorsement by NVLAP or any agency of the US Government.

1.1 Summary

The Dassault A.T. *ARTEMA US Mobile* EFT/POS Terminal complies with the requirements for a CDPD radio under Part 22, Subpart H of the FCC Rules and Regulations.

2.0 Description of Equipment Under Test (EUT)

The Dassault A.T. *ARTEMA US Mobile* EFT/POS Terminal (EUT) is a portable hand-held, battery-powered Electronic Fund Transfer/Point of Sale terminal which contains a CDPD Modem Card. Both the P4432-909 and P4432-959 models of the *ARTEMA US Mobile* consist of a Hand-Held Terminal (EUT) and a Base Charger (M/N: P4432-160). The two hand-held terminals, Models: P4432-051 and P4432-053 are identical except that the -053 has secured keyboard circuitry. The EUT incorporates a 17 key keypad, magnetic card reader, removable/re-chargeable battery pack, and a printer. A RangeStar, P/N: 100800 antenna has been incorporated in the *ARTEMA US Mobile*. A specification sheet on the RangeStar antenna is included in Appendix C. The following are the specifications of the *ARTEMA US Mobile* transmitter:

Tx Frequency Range:	824 MHz to 849 MHz
Maximum RF Output:	0.6 Watts (ERP)

3.0 Conducted Emissions Testing

Since the EUT can be operated while placed on the Base Charger (M/N: P4432-160) unit, AC power line conducted emissions testing was performed in accordance with Part 15 of the FCC Rules and Regulations.

The EUT was placed on an 80 cm high 1 x 1.5 m non-conductive table above a ground plane. Power to the CPU was provided through a Solar Corporation 50 Ω /50 μ H Line Impedance Stabilization Network bonded to a 3 x 2 meter ground plane. The LISN has its AC input supplied from a filtered AC power source. Power was supplied to the peripherals through a second LISN. The peripherals were placed on the table in accordance with ANSI C63.4-1992. Power and data cables were moved about to obtain maximum emissions.

The 50 Ω output of the LISN was connected to the input of the spectrum analyzer and the emissions in the frequency range of 450 kHz to 30 MHz was measured. The detector function was set to quasi-peak or peak, as appropriate, and the resolution bandwidth during testing was at least 9 kHz, with all post-detector filtering no less than 10 times the resolution bandwidth.

Table 2: System Under Test

FCC ID: PB8P4432-051

EUT: Dassault A.T. *ARTEMA US Mobile* EFT/POS Terminal

Table 3: Interface Cables Used

Non-shielded I/O cables were used throughout the system under test.

The EUT was powered via a non-shielded AC power cord.

Table 4: Measurement Equipment Used

The following equipment is used to perform the AC power line conducted emissions measurements:

Hewlett-Packard Spectrum Analyzer: HP8568B

Hewlett-Packard Quasi-Peak Adapter: HP85650A

Hewlett-Packard Preselector: HP85685A

Solar 50 Ω /50 μ H Line Impedance Stabilization Network: 8012-50-R-24-BNC

Solar 50 Ω /50 μ H Line Impedance Stabilization Network: 8028-50-TS-24-BNC

RG-214 semi-rigid coaxial cable

RG-223 double-shielded coaxial cable

Appendix A

Statement of Measurement Uncertainty

For the purposes of the measurements performed by Washington Laboratories, the measurement uncertainty is ± 2.3 dB. This has been calculated for a *worst-case situation* (radiated emissions measurements performed on an open area test site).

The following measurement uncertainty calculation is provided:

$$\text{Total Uncertainty} = (A^2 + B^2 + C^2)^{1/2}/(n-1)$$

where:

A = Antenna calibration uncertainty, in dB = 2 dB

B = Spectrum Analyzer uncertainty, in dB = 1 dB

C = Site uncertainty, in dB = 4 dB

n = number of factors in uncertainty calculation = 3

Thus, Total Uncertainty = $0.5 (2^2 + 1^2 + 4^2)^{1/2} = \pm 2.3$ dB.

Appendix B

Novatel Certification Test Report for the CDPD Modem Module FCC ID: NBZNRM-6832

PAGE NO. 1 of 30.

Required information per ISO/IEC Guide 25-1990, paragraph 13.2:

- a) TEST REPORT
- b) Laboratory: M. Flom Associates, Inc.

GENERAL INFORMATION

1. Prior to testing, the deviation for audio modulation and each of the respective SAT + ST tones were set as close as possible to the required limit.
2. Except for audio modulation, which was applied externally, Wideband Data SAT, ST and all other tones and operational modes were provided by a test control unit incorporating appropriate software. Worst case repetition rate for Wideband Data was 10 kb/s.
3. Spurious radiation was measured at three (3) meters.
4. The two cellular frequency bands are available to the user automatically. Please refer to the manual contained in the documentation.
5. The normal modes of modulation are:
 - ☐ (a) VOICE
 - ☐ (b) WIDEBAND DATA
 - ☐ (c) SAT
 - ☐ (d) ST
 - ☐ (e) SAT + VOICE
 - ☐ (f) SAT + DTMF
 - ☐ (g) CDMA
 - ☐ (h) TDMA
 - ☐ (i) NAMPS VOICE
 - ☐ (j) NAMPS DSAT
 - ☐ (k) NAMPS ST
 - ☐ (l) NAMPS VOICE + DSAT
 - ☒ (m) GMSK

STANDARD TEST CONDITIONS
and
ENGINEERING PRACTICES

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.4-1992, section 6.1.9, and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104 °F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Prior to testing, the EUT was tuned up in accordance with the manufacturer's alignment procedures. All external gain controls were maintained at the position of maximum and/or optimum gain throughout the testing.

Measurement results, unless otherwise noted, are worst case measurements.

PAGE NO. 7 of 30.

NAME OF TEST: R. F. Power Output (Radiated)

SPECIFICATION: 47 CFR 2.1046(a)

GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996

TEST EQUIPMENT: As per attached page

MEASUREMENT PROCEDURE (RADIATED)

1. The EUT was placed on an open-field site and its radiated field strength at a known distance was measured by means of a spectrum analyzer. Equivalent loading was calculated from the equation $P_t = ((E \times R)^2 / 49.2)$ watts, where $R = 3m$.
2. Measurement accuracy is ± 1.5 dB.

NAME OF TEST: Emission Masks (Occupied Bandwidth)

SPECIFICATION: 47 CFR 2.1049(c) (1)

GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996

TEST EQUIPMENT: As per previous page

MEASUREMENT PROCEDURE

1. The EUT and test equipment were set up as shown on the following page, with the Spectrum Analyzer connected.
2. For EUTs supporting audio modulation, the audio signal generator was adjusted to the frequency of maximum response and with output level set for ± 2.5 kHz deviation (or 50% modulation). With level constant, the signal level was increased 16 dB.
3. For EUTs supporting digital modulation, the digital modulation mode was operated to its maximum extent.
4. The Occupied Bandwidth was measured with the Spectrum Analyzer controls set as shown on the test results.
5. MEASUREMENT RESULTS: ATTACHED

GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996
TEST EQUIPMENT: As per attached page

MEASUREMENT PROCEDURE

1. The EUT was connected to a coaxial attenuator and then to a Spectrum Analyzer.
2. A notch filter was introduced to reduce or eliminate spurious emission which could be generated internally in the spectrum analyzer.
3. Measurements were made over the range from 45 kHz to 10 GHz for the worst case modulation so both the highest and lowest R.F. power settings.
4. All other emissions were 20 dB or more below the limit.
5. Spectrum analyzer bandwidth was set to section 22.917(h) as applicable.
6. MEASUREMENT RESULTS: ATTACHED

NAME OF TEST: Field Strength of Spurious Radiation
SPECIFICATION: 47 CFR 2.1053(a)
GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996
TEST EQUIPMENT: As per attached page

MEASUREMENT PROCEDURE

1. A description of the measurement facilities was filed with the FCC and was found to be in compliance with the requirements of Section 15.38, by letter from the FCC dated March 3, 1997, FILE 31040/SIT. All pertinent changes will be reported to the Commission by up-date prior to March 2000.
2. At first, in order to locate all spurious frequencies and approximate amplitudes, and to determine proper equipment functioning, the test sample was set up at a distance of three meters from the test instrument. Valid spurious signals were determined by switching the power on and off.
3. In the field, the test sample was placed on a wooden turntable above ground at three (or thirty) meters away from the search antenna. Excess power leads were coiled near the power supply.

The cables were oriented in order to obtain the maximum response. At each emission frequency, the turntable was rotated and the search antennas were raised and lowered vertically.
4. The emission was observed with both a vertically polarized and a horizontally polarized search antenna and the worst case was used.
6. The field strength of each emission within 20 dB of the limit was recorded and corrected with the appropriate cable and transducer factors.
7. The worst case for all channels is shown.
8. Measurement results: ATTACHED FOR WORST CASE

RADIATED TEST SETUP

NOTES:

- (a) Search Antenna - Rotatable on boom
 (b) Non-metallic boom
 (c) Non-metallic mast
 (d) Adjustable horizontally
 (e) Equipment Under Test
 (f) Turntable
 (g) Boom adjustable in height.
 (h) External control cables routed horizontally at least one wavelength.
 (i) Rotatable

- (j) Cables routed through hollow turntable center
 (k) 30 cm or less
 (l) External power source
 (m) 10 cm diameter coil of excess cable
 (n) 25 cm (V), 1 m-7 m (V, H)
 (o) 25 cm from bottom end of 'V', 1m normally
 (p) Calibrated Cable at least 10m in length
 (q) Amplifier (optional)
 (r) Spectrum Analyzer

NAME OF TEST: Frequency Stability (Temperature Variation)

SPECIFICATION: 47 CFR 2.1055(a)(1)

GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996

TEST CONDITIONS: As Indicated

TEST EQUIPMENT: As per previous page

MEASUREMENT PROCEDURE

1. The EUT and test equipment were set up as shown on the following page.
2. With all power removed, the temperature was decreased to -30°C and permitted to stabilize for three hours. Power was applied and the maximum change in frequency was noted within one minute.
3. With power OFF, the temperature was raised in 10°C steps. The sample was permitted to stabilize at each step for at least one-half hour. Power was applied and the maximum frequency change was noted within one minute.
4. The temperature tests were performed for the worst case.
5. MEASUREMENT RESULTS: ATTACHED

NAME OF TEST: Frequency Stability (Voltage Variation)

SPECIFICATION: 47 CFR 2.1055 (b) (1)

GUIDE: EIA/IS-19-B-1988
TIA/EIA/IS-137-A-1996

TEST EQUIPMENT: As per previous page

MEASUREMENT PROCEDURE

1. The EUT was placed in a temperature chamber at $25 \pm 5^\circ\text{C}$ and connected as for "Frequency Stability - Temperature Variation" test.
2. The power supply voltage to the EUT was varied from 85% to 115% of the nominal value measured at the input to the EUT.
3. The variation in frequency was measured for the worst case.

RESULTS: Frequency Stability (Voltage Variation)

Attention: Authorization & Evaluation Division
Applicant: Novatel Wireless Technologies Ltd.
Equipment: NRM-6832
FCC ID: NBZNRM-6832
FCC Rules: 1.1310, 22(h)
and 47 CFR 1.1307, Environmental Assessment

Gentlemen:

On behalf of the Applicant, enclosed please find the Supplemental Test Data Report and all pertinent documentation, the whole for Environmental Assessment of the referenced equipment as shown.

We trust the same is in order. Should you need any further information, kindly contact the writer who is authorized to act as agent.

Sincerely yours,

Morton Flom, P. Eng.

(THE FOLLOWING WILL BE PLACED IN INSTRUCTION MANUAL)

INSTRUCTIONS TO INSTALLERS & USERS

Minimum Safe 0.1185 m (4.7 inches)
Distance

Antenna Mounting Antenna as supplied by manufacturer must not be mounted at a location such that any person or persons can come closer than the above-indicated minimum safe distance to the antenna.

Antenna Do not substitute any antenna for the one
Substitution supplied by manufacturer. You may be exposing person(s) to harmful radiation. Contact supplier or manufacturer for further instructions.

IDENTIFICATION OF THE EQUIPMENT UNDER TEST (EUT)NAME AND ADDRESS OF APPLICANT:

Novatel Wireless Technologies Ltd.
6715 - 8th St., N.E., Suite 200
Calgary, AB T2E 7H7 Canada

VENDOR:

Applicant

FCC ID:

NBZNRM-6832

MODEL NO:

NRM-6832

DESCRIPTION:

CDPD Modem Module

TYPE OF EMISSION:

28K8FXW

FREQUENCY RANGE, MHz:

824 to 849

POWER RATING, Watts:

0.006 to 0.6
___ Switchable ___ Variable ___ N/A

MODULATION:

___ x AMPS
___ TDMA
___ CDMA
___ OTHER

ANTENNA:

___ HELICAL
___ x MONOPOLE
___ OTHER

STANDARD TEST CONDITIONS
and
ENGINEERING PRACTICES

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.4-1992, section 6.1.9, and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104 °F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Prior to testing, the EUT was tuned up in accordance with the manufacturer's alignment procedures. All external gain controls were maintained at the position of maximum and/or optimum gain throughout the testing.

Measurement results, unless otherwise noted, are worst case measurements.

PAGE NO. 4 of 6.

Name of test: Environmental Assessment

Specification: FCC: 47 CFR 1.1310

Measurement Guide: ANSI/IEEE C95.1 1992

Test Equipment: Maximum Permissible Exposure (MPE)
measurement system, consisting of:
Narda 8717-1174R, Radiation meter
Narda 8761D, E-field probe (300 kHz - 3 GHz)
(Calibrated Nov-98)

Measurement Procedure:

1. The following measurements were performed with a Narda probe using ANSI/IEEE C95.1 as a guide.
2. Prior to making any measurements, the measurements system was calibrated in accordance with the manufacturer's procedures.
3. The EUT's radiating element (antenna) was placed on a 1 m tall table for ease of testing. For equipment normally operated on a metal surface, a ground plane was used.
4. The remaining equipment necessary to operate the EUT was maintained at a distance from the measurement arrangement suitable to minimize interference with the measurements.
5. The minimum safe distance was calculated from the formula $\text{Power Density} = \text{EIRP} / 4\pi R^2$ (Peak Watts/m²). The calculation is shown with the measurement data.
6. With the EUT operating at maximum power, a search was initiated for worst case emissions with the probe raised and lowered over a range of 0.2 to 2 meters in height and over a horizontal plane of 0° to 360°.
7. Average values were calculated for the whole body (0.2-2.0m), lower body (0.2-0.8m) and upper body (1.0-2.0m).

Results: Attached.

Name of test:

Environmental Assessment

Rated Probe Power
Density:
Error Margin:Narda 8761D Probe = $10 \mu\text{W}/\text{cm}^2$ to $20 \text{ mW}/\text{cm}^2$

Narda 8717 Meter = 1%

EUT Description:

See Page 2.

Power[W ERP]

= 0.6

Test Frequency, MHz

= 836.4

Ant. Gain[dBi]

2.15 dBi

Power[W EIRP]

 $P[W ERP] \times 10^{(2.15/10)}$, Watts EIRP = 0.984

MPE Limit

 $f/1500 = 0.5576 \text{ mW}/\text{cm}^2$

(at test frequency)

 $= 5.576 \text{ W}/\text{m}^2$ Theoretical safe
distance: $R_{[m]} = [(P[W EIRP]) / (4\pi \times \text{Limit}_{[W/m^2]})]^{1/2}$ $R_{[m]} = [0.984 / (4\pi \times 5.576)]^{1/2} = 0.1185$ $R_{[inches]} = 4.7$

Results:

at theoretical safe
distance

Probe Height, m	Power Density, mW/cm^2
2.0	0.12
1.8	0.14
1.6	0.14
1.4	0.17
1.2	0.20
1.0	0.27
0.8	0.16
0.6	0.065
0.4	0.071
0.2	0.063

Calculations:

The measured power density readings were summed and the results divided by the number of readings to calculate the average.

For whole body:

Average of 0.2 to 2.0 m, $\text{mW}/\text{cm}^2 = 0.1419$

For lower body:

Average of 0.2 to 0.8 m, $\text{mW}/\text{cm}^2 = 0.08975$

For upper body:

Average of 1.0 to 2.0 m, $\text{mW}/\text{cm}^2 = 0.177$

TCP Suspension Enable

Description:

This allows any TCP session to be suspended.

Format:

AT#TCPX?
AT#TCPX=0 or 1

Query TCP suspend enable
Enable/Disable TCP suspend

Validity:

Other Considerations:

Related Topics:

Answer

Description:

This feature represents of the normal ATA answer command. In this system, the ATA will be sent by the host to release any pending push messages, which would have asserted the Ring Indication line of the modem interface.

Format:

ATA

To answer a Ring Indication

Validity:

Other Considerations:

Related Topics:

Telnet Echo

Description:

A command to assist in Telnet terminal emulation. This command and the associated S register determine how characters are echoed, either locally, remotely or with no echo.

Format:

ATS60?	Queries echo mode
ATS60=0	No echo
ATS60=1	Local echo (default)
ATS60=2	Remote echo

Validity:

Other Considerations:

Related Topics:

Fixed Parameters

The following behaviors are fixed for the NRM.

BEHAVIOR	SETTING	Equivalent AT command
Online Mode Echo	Disabled	ATF0
Quiet Mode	Disabled	ATQ0
Extended Result Codes	Enable all	ATX2
Transmit Control	Automatic timed	AT\T1
Subscriber Identity	NRM supports only one NEI.	AT\S0

Appendix C

Antenna Specification

800 MHz Cellular P/N 100800

Performa Series Antennas

This small embedded antenna provides the most reliable, easy to use and adjustment free antenna technology for handling during assembly and implementation by developers.

Features

- Small and lightweight
- No tuning components
- Available in tube and reel packing for automatic mounting

Technical Specification Sheet

100800 Type

Electrical	
Frequency range	824 - 894 MHz
Gain ⁽¹⁾	0 dBi peak
VSWR ⁽¹⁾	Less than 2.3:1
Front-to-back ratio	n/a
Polarization	Linear
Azimuth Beamwidth	Omnidirectional
Power handling	10 watt cw
Feedpoint impedance	50 ohms unbalanced
Note (1) Figures dependant on ground plane size	
Mechanical	
Size (not including tabs)	38.1 x 15.3 x 1.6 mm
Weight	1 g
Mounting	On PCB by tabs mated with plated through holes
