

Variant of Precise 100 MC fingerprint reader with short USB cable

The radiated emission tests of the Precise 100 MC fingerprint reader were performed using a Precise 100 MC device with a long (2.0 m) USB cable. The Precise 100 MC also exists in a variant with a short (0.4 m) USB cable. Since a long cable is worse than a short cable regarding radiated emission, we only tested the long cable variant at the DELTA Electronics test lab.

However, we have performed measurements our selves that confirms that the short cable variant is not a worse emitter than the long cable variant.

We intend to use the same FCC ID for the long and the short cable variant of the Precise 100 MC fingerprint reader.
