

Following is revised text for a leaflet to be added to the manual for the phone plug. The intent of this revised text is to further clarify RF Exposure related issues.

Attention

This device is in compliance with the FCC RF Exposure requirements when used with any applicable Ericsson cellular terminal.

The DBA-10 uses radio-signals, cellular and landline networks as well as user-programmed functions, which can not guarantee connection under all conditions. Therefore you should never rely solely upon any electronic device for essential communication, i.e. medical emergencies.

Most modern electronic equipment, for example, equipment in hospitals and cars, is shielded from RF energy. However, certain electronic equipment is not. Therefore:

- Turn off all your electronic devices when in a blasting area or in areas posted " turn off two-way radio ".
- Turn off all your electronic devices before boarding any aircraft.
- Do not use any electronic device in an aircraft without crew permission.
- Do not use any electronic device near medical equipment without asking permission.

Changes or modifications not expressly approved by Ericsson will void the user ' s authority to operate the equipment. Do not use any other accessories than Ericsson originals.
