## **1. General**

This equipment has been shown to be capable of compliance with the applicable technical standards and was tested in accordance with the measurement procedures as indicated in this report.

We attest to the accuracy of data. All measurements reported herein were performed by SK Tech Co., Ltd. and were made under Chief Engineer's supervision.

We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

## **2. Test Site**

SK TECH Co., Ltd.

### **2.1 Location**

820-2, Wolmoon Ri, Wabu-Up, Namyangju-Si, Kyunggi-Do, Korea

The test site is in compliance with ANSI C63.4/1992 for measurement of radio interference.

## 2.2 List of Test and Measurement Instruments

## 2.3 Test Date

Date of Application : Oct. 23, 2000

Date of Test : Oct. 23, 2000 ~ Oct. 24, 2000

## 2.4 Test Environment

See each test item's description.

### **3. Description of the tested samples**

The EUT is TFT LCD Monitor.

#### **3.1 Rating and Physical Characteristics**

- Resolution support : XGA 1024 x 768(max)
- Power consumption : On working (<30 watt) Off (<4 watt)
- Power saving : VESA DPMS
- Power supply adapter : AC 100V~240V, 50~60Hz (Input) 12VDC(Output)

#### **3.2 Submitted Documents**

N/A

## 4. Measurement Conditions

Testing Input Voltage : AC 120V, 60Hz

### 4.1 Modes of Operation

The EUT was in the following operation mode during all testing;

Scrolling the "H" pattern in white letter in black screen.

The Resolution is 1024x768, 48.6KHz, 60Hz.

### 4.2 List of Peripherals

Description	Manufacturer	Model Name	Serial No.	FCC ID
Personal Computer	H.P	Brio BA600/550	SG01901646	DoC
Printer	H.P	2225C	3245S12493	DSI6XU2225
Keyboard	H.P	SK-2502C	M0004103083	DoC
Mouse	H.P	M-S48a	LZE01252031	DoC
Speaker	EASTERN	CeronH-333	None	N/A
AC/DC Adapter	ITE Power supply	PW150	KA1202N01	N/A

## 4.3 Type of Used Cables

Description	Length	Type of shield	Manufacturer	Remark
Monitor super jack cable	1.2m	Non-Shield	None	
Monitor A/V cable	1.2m	Non-Shield	None	
Monitor USB cable(x2)	1.2m	Non-Shield	None	
PC power cable	1.2m	Non-Shield	None	
VGA cable	1.2m	Non-Shield	None	
Parallel cable	1.2m	Shield	None	
Printer power cable	1.2m	Non-Shield	None	
Keyboard interface cable	1.8m	Shield	None	
Mouse interface cable	1.8m	Shield	None	
Speaker power cable	1.0m	Non-Shield	None	
Speaker interface cable	1.0m	Non-Shield	None	
Adapter cable	1.5m	Non-Shield	None	

## 4.4 Test Setup

The test setup photographs showed the external supply connections and interfaces.

## 4.5 Uncertainty

### 1) Radiated disturbance

$$U_c \text{ (Combined standard Uncertainty)} = \pm 1.9 \text{ dB}$$

$$\text{Expanded uncertainty } U = K U_c$$

$$K = 2$$

$$\therefore U = \pm 3.8 \text{ dB}$$

### 2) Conducted disturbance

$$U_c = \pm 0.88 \text{ dB}$$

$$U = K U_c = 2 \times U_c = \pm 1.8 \text{ dB}$$

## 5. EMISSION Test

### 5.1 Conducted Emissions

**Result:****Pass**

The line-conducted facility is located inside a 2.0M x 3.6M x 7.2M shielded enclosure.

The shielding effectiveness of the shielded room is in accordance with MIL-Std-285 or NSA 604-05.

A 1m x 1.5m wooden table 80cm. high is placed 40cm. away from the vertical wall and 1.5m away from the side wall of the shielded room. Kyoritsu Model KNW-407 (10kHz-30MHz)

50ohm/50 uH Line-Impedance Stabilization Networks(LISNs) are bonded to the shielded room.

The EUT is powered from the Kyoritsu LISN and the support equipment is powered from the Kyoritsu LISN. Power to the LISNs are filtered by a high-current high-insertion loss Lindgren enclosures power line filters (100dB 14kHz-10GHz).

The purpose of the filter is to attenuate ambient signal interference and this filter is also bonded to the shielded enclosure.

All electrical cables are shielded by braided tinned copper zipper tubing with inner diameter of 1/2".

If the EUT is a DC-powered device, power will be derived from the source power supply it normally will be powered from and this supply lines will be connected to the Kyoritsu LISN.

All interconnecting cables more than 1 meter were shortened by non-inductive bundling (serpentine fashion) to a 1-meter length.

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. The RF output of the LISN was connected to the spectrum analyzer to determine the frequency producing the maximum EME from the EUT.

The spectrum was scanned from 450kHz to 30MHz with 100msec. sweep time.

The frequency producing the maximum level was reexamined using EMI/field Intensity Meter (ESHS 10) and Quasi-Peak adapter. The detector function was set to CISPR quasi-peak mode.

The bandwidth of the receiver was set to 10kHz. The EUT, support equipment, and interconnecting cables were arranged and manipulated to maximize each EME emission.

Each emission was maximized by: switching power lines; varying the mode of operation or resolution; clock or data exchange speed; if applicable; whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of conducted test.

Each EME reported was calibrated using self-calibrating mode.

28.008	24.8	A	0.8	0.8	26.4	48.0	21.6

**NOTES:**

1. All modes of operation were investigated and the worst-case emission are reported.
2. All other emissions are non-significant.
3. All readings are calibrated by self-mode in receiver.
4. Measurements using CISPR quasi-peak mode.
5. Line A = LINE-PE, Line B = NEUTRAL-PE
6. C/F = Correction Factor
7. C/L = Cable Loss

**♠ Margin Calculation**

$$(6)\text{Margin} = (5)\text{Limit} - (4)\text{Actual}$$

$$[(4)\text{Actual} = (1)\text{Reading} + (2)\text{C/F} + (3)\text{C/L}]$$

## 5.2 Radiated Emissions

**Result :****Pass**

Preliminary measurements were made indoors at 1 meter using broadband antennas, broadband amplifier, and spectrum analyzer to determine the frequency producing the maximum EME.

Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The system configuration, clock speed, mode of operation or video resolution, turntable azimuth with respect to the antenna were noted for each frequency found.

The spectrum was scanned from 30 to 300 MHz using biconical antenna and from 300 to 1000 MHz using log-periodic antenna. Above 1GHz, linearly polarized double ridge horn antennas were used.

Final measurements were made outdoors at 3-meter test range using SCHWARZBECK dipole antennas. The test equipment was placed on a wooden table situated on a 4x4 meter area adjacent to the measurement area. Turntable was to protect from weather in the dome that made with FRP.

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined and investigated using EMI/Field Intensity Meter(ESVS 10) and Quasi-Peak Adapter. The detector function was set to CISPR quasi-peak mode and the bandwidth of the receiver was set to 100kHz or 1MHz depending on the frequency or type of signal.

The half-wave dipole antenna was tuned to the frequency found during preliminary radiated measurements. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the maximum emission for the frequency and were placed on top of a 0.8-meter high non-metallic 1 x 1.5 meter table.

The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each EME emission. The turntable containing the system was rotated; the antenna height was varied 1 to 4 meters and stopped at the azimuth or height producing the maximum emission.

Each emission was maximized by: varying the mode of operation or resolution; clock or data exchange speed, and/or support equipment, if applicable; and changing the polarity of the antenna, whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of radiated emission test.

Each EME reported was calibrated using self-calibrating mode.

**Table 3 : Test Data, Radiated Emissions**

Frequency (MHz)	Pol.	Height [m]	Angle [° ]	(1) Reading (dB $\mu$ V)	(2) AFCL (dB/m)	(3) Actual (dB $\mu$ V/m)	(4) Limit (dB $\mu$ V/m)	(5) Margin (dB)
61.72	V	1.0	45	26.6	8.5	35.1	40.0	4.9
138.73	H	3.8	47	20.5	16.5	37.0	43.5	6.5
