|  | 150000-300000 | $0.158 f^{0.5}$ | $4.21 \times 10^{-4} f^{0.5}$ | $6.67 \times 10^{-5} f$ | $616000 / f^{1.2}$ |
|  | Note: $f$ is frequency <br> *Based on nerve stin <br> ** Based on specific | in MHz. <br> lation (NS). <br> bsorption rate (SA |  |  |  |

## B.7.2 Test procedure

For the purpose of this evaluation, a minimum distance of 20 cm was used to calculate the equivalent plan wave power density based on the Average EIRP values obtained in B. 2 to be compared with the power density limit, according to following formula:

$$
S_{e q}=\frac{P_{a v g} \cdot G}{4 \cdot \pi \cdot R^{2}} \Rightarrow S_{e q}=\frac{E I R P}{4 \cdot \pi \cdot R^{2}}
$$

Where:
$S_{e q}=$ Equivalent Plane Wave Power Density, in Watts per square meter.
$P_{\text {avg }}=$ Source-Based Average Power at antenna terminals, in Watts.
$E I R P=$ Equivalent Isotropically Radiated Power, in Watts.
$G=$ Gain of the Transmitting Antenna.
$R=$ Distance from the Transmitting Antenna, in meters.

## B.7.3 Results

## B.7.3.1 Antenna A

| Power Density Calculation |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
