Letter of Declaration

According to the guidance of FCC KDB 616217 we have determined that for the Dell Mini-Cooper with RSB that SAR testing with simultaneously transmitting antennas is not necessary when installed with the WLAN and WWAN cards listed below.

WWAN	FCC ID	Max SAR (Part 22H)	Max SAR (Part 24E)
Ericsson F3507G	VV7-MBMF3507G-D	1.32W/Kg	1.19W/Kg
Qualcomm UNDP-1D	NBZNRMUNDP-1D	0.73W/Kg	1.407W/Kg
Novatel Wireless E725	PKRNVWE725	1.15W/Kg	1.20W/Kg
WLAN	FCC ID	Max SAR (Part 15)	Max SAR (Part 27)
Intel 512ANXHMW	PD9512ANXHD	0.066W/Kg	0.150W/Kg

Justification:

- Summing the worst case WWAN and WLAN stand-alone SAR values is less than 1.6W/Kg: $1.407\text{W/Kg} + 0.150\text{W/Kg} = 1.557\text{W/Kg}$.
- Antenna to antenna separation distance is 27cm
- WLAN antenna to user separation distance is 6.1cm
- WWAN antenna to user separation distance is 9.5cm
