# Annex A. Evaluation Description

#### A.1 RF Exposure Limit

According to the FCC part 1.1310:

- At operating frequencies above 6 GHz, the MPE limits listed in the table below shall be used in all cases to evaluate the environmental impact of human exposure to RF radiation as specified in §1.1307(b) of this part..

#### Limits for Maximum Permissible Exposure (MPE) (TABLE 1 TO §1.1310(E)(1))

Frequency range (MHz)	Electric field strength   Magnetic field strength   (V/m)   (A/m)		Power density (mW/cm <sup>2</sup> )	Averaging time (minutes)				
	(ii) Limits for General Population/Uncontrolled Exposure							
0.3-1.34	614	1.63	*(100)	<30				
1.34-30	824/f	2.19/f	*(180/f2)	<30				
30-300	27.5	0.073	0.2	<30				
300-1,500	-	-	f/1500	<30				
1,500-100,000	-	-	1.0	<30				

f = frequency in MHz. \* = Plane-wave equivalent power density.

For the purpose of this evaluation, a distance of 20cm was used to calculate the equivalent plan wave power density, to be compared with the limit described in the table above:

$$S_{eq} = \frac{P_{avg} \cdot G}{4 \cdot \pi \cdot R^2}$$

Where:

 $S_{eq}$  = Equivalent Plane Wave Power Density

 $P_{ava}$  = Average Power at antenna terminals in Watts

G = Gain of the Transmitting Antenna

R =Distance from the Transmitting Antenna in meters

### A.2 Exposure from source with Multiple Frequencies

If the device is designed such that more than one antenna can functionally transmit at the same time, the RF exposure evaluation shall be conducted while all antennas are transmitting. The individual exposure level ratios shall be totalled and used for compliance purposes.:

$$\sum \frac{{S_{eq}}_i}{{S_{Limit}}_i} < 1$$

# Annex B. RF Exposure Evaluation Results

#### **B.1** Declared Maximum Output Power

According to the applicant, the maximum conducted transmit power (including the upper tolerance) for the EUT under evaluation are as follows:

Mode	Max Output Power (incl. Tolerance)	
UNII 5	13.5 dBm	
UNII 6	13.5 dBm	
UNII 7	13.5 dBm	
UNII 8	13.5 dBm
