Declaration Regarding for **5.9 GHz Client device**.

We, Intel Corporation, attest that this device under FCC ID **PD9BE201D2** complies with device protocol requirements and operational restrictions required for **5.9 GHz** as follows:

This device operates in the 5.9 GHz band as an indoor Client only device.

- 1) As a client device (EUT) this will not directly connect to another client device.
- 2) As client device (EUT) this will only associate and connect with an indoor Access Point (AP) or indoor Subordinate.
- 3) As a client device (EUT) this will always be under the control of an indoor AP. However, there may exist situations where the client may transmit brief messages, prior to being under the control of an AP, to join an AP network. But these brief messages will only occur if the client has detected a signal confirming that an AP is operating on a particular channel. These brief messages will have a time-out mechanism if the client does not receive a response from an AP.

Best Regards,

---
