

# FCC Test Report

Test report no.: EMC\_813FCC22-24\_2004

FCC Part 22, 24 / RSS 132, 133  
Model: iWM3130

FCC ID: PDC-IWM313XSM  
IC ID: 5079A-IWM313XS

TTI-P-G 081/94-A0

Accredited according to ISO/IEC 17025

Bluetooth Qualification  
Test Facility  
(BQTF)

FCC listed # 101450

IC recognized # 3925

## CETECOM Inc.

411 Dixon Landing Road • Milpitas, CA 95035 • U.S.A.

Phone: + 1 (408) 586 6200 • Fax: + 1 (408) 586 6299 • E-mail: [info@cetecomusa.com](mailto:info@cetecomusa.com) • <http://www.cetecom.com>

CETECOM Inc. is a Delaware Corporation with Corporation number: 2113686

Board of Directors: Dr. Harald Ansorge, Dr. Klaus Matkey, Hans Peter May

### 1.3 Details of applicant

Name : At Road, Inc.  
Street : 47200 Bayside Pkwy  
City / Zip Code : Fremont, CA 94538  
Country : USA  
Contact : Hung Phan  
Telephone : 510 870 1252  
Tele-fax : 510 870 1281  
e-mail : [hphan@road-inc.com](mailto:hphan@road-inc.com)

### 1.4 Application details

Date of receipt test item : 2004-11-01  
Date of test : 2004-11-01/02

### 1.5 Test item

Manufacturer : Applicant  
Marketing Name : iWM313X  
Model No. : iWM3130  
Description : [GSM 850/1900 & 802.11b WLAN model for vehicular use](#)  
FCC-ID : **PDC-IWM313XSM**  
IC-ID : **5079A-IWM313XS**

#### Additional information

Frequency : 824.2MHz – 848.8MHz for GSM 850,  
1850.2MHz – 1909.8MHz for PCS 1900  
Type of modulation : GMSK  
Number of channels : 124 for GSM-850, 299 for PCS-1900  
Antenna : External  
Power supply : 12VDC Nominal voltage (10-24VDC)  
Output power : 24.67dBm (293.09mW) max. ERP measured in GSM-850  
26.14dBm (411.15mW) max. EIRP measured in PCS-1900  
Extreme temp. Tolerance : Lower: -20°C Upper: +60°C

### 1.6 Test standards

FCC Part 22,24 / RSS132,133 r1

Note: All radiated measurements were made in all three orthogonal planes. The values reported are the maximum values.

[The EUT \(iWM3130\) carries pre-certified Siemens GSM module model# MC46 with FCC ID: QIPMC46](#)

[This test report covers full radiated testing as per FCC 22/24 on EUT with GSM module. All conducted measurements for GSM 1900 are covered under test report# 2-205420436/02 and for GSM850 are covered under test report# 2\\_3350-01-01/03.](#)

## **2.2 Test report**

**TEST REPORT**

**POWER OUTPUT****§ 22.913(a) / § 24.232 (b)****Summary:**

During the process of testing, the EUT was controlled via Rhode & Schwarz Universal Radio Communication tester (CMU 200) to ensure max. Power transmission and proper modulation.

This paragraph contains average output power, peak output power, EIRP & ERP measurements for the EUT. In all cases, the peak output power is within the specified limits.

**Method of Measurements:**

The EUT was set up for the max. Output power with pseudo random data modulation.

The power was measured with R&S Spectrum Analyzer ESIB 40 (peak)

These measurements were done at 3 frequencies,

824.2 MHz, 836.6 MHz and 848.8 MHz (bottom, middle and top of operational frequency range) for GSM-850

1850.2 MHz, 1880.0 MHz and 1909.8 MHz (bottom, middle and top of operational frequency range) for PCS-1900

ERP (GSM-850)

§22.913(a)

**Limits:**

Power Control Level	Burst Peak ERP
5	≤38.45dBm (7W)

**EIRP**

Frequency (MHz)	Power Control Level	Burst Peak (dBm)	
		EIRP	ERP

**CHANNEL 810**

**EMISSION LIMITS TRANSMITTER****§2.1051 / §24.238****Measurement Procedure:**

The following steps outline the procedure used to measure the radiated emissions from the EUT. The site is constructed in accordance with ANSI C63.4 – 2003 requirements and is recognised by the FCC. The spectrum was scanned from 30 MHz to the 10th harmonic of the highest frequency generated within the equipment, which is the transmitted carrier that can be as high as 848.8MHz for GSM-850 & 1910 MHz for PCS-1900. The resolution bandwidth is set as outlined in Part 24.238. The spectrum was scanned with the mobile station transmitting at carrier frequencies that pertain to low, mid and high channels of the GSM-850 & PCS-1900 bands.

**The final Radiated emission test procedure is as follows:**

- a) The test item was placed on a 0.8 meter high non-conductive stand at a 3 meter test distance from the receive antenna.
- b) The antenna output was terminated in a 50-ohm load.
- c) A double-ridged wave guide antenna was placed on an adjustable height antenna mast 3 meters from the test item for emission measurements.
- d) Detected emissions were maximized at each frequency by rotating the test item and adjusting the receive antenna height and polarization. The maximum meter reading was recorded. The radiated emission measurements of all non-harmonic and harmonics of the transmit frequency through the 10th harmonic were measured with peak detector and 1MHz bandwidth. If the harmonic could not be detected above the noise floor, the ambient level was recorded. The equivalent power into a dipole antenna was determined by the substitution method described for ERP measurements.

**Measurement Limit:**

Sec. 24.238 Emission Limits.

(a) On any frequency outside a licensee's frequency block (e.g. A, D, B, etc.) within the USPCS spectrum, the power of any emission shall be attenuated below the transmitter power (P, in Watts) by at least  $43 + 10 \log(P)$  dB. The specification that emissions shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log(P)$  dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

**Measurement Results:**

Radiated emissions measurements were made only at the upper, middle, and lower carrier frequencies of the GSM-850 & PCS-1900 bands. It was decided that measurements at these three carrier frequencies would be sufficient to demonstrate compliance with emissions limits because it was seen that all the significant spurs occur well outside the band and no radiation was seen from a carrier in one block of the GSM-850 & PCS-1900 band into any of the other blocks respectively. The equipment must still, however, meet emissions requirements with the carrier at all frequencies over which it is capable of operating and it is the manufacturer's responsibility to verify this.

**RECEIVER RADIATED EMISSIONS****§ 2.1053 / RSS-133****NOTE:**

1. The radiated emissions were done with different settings, using the relevant pre-amplifiers for the relevant frequency ranges. This is the reason that the graphs show different noise levels. In the range between 3GHz and 26.5GHz very short cable connections to the antenna was used to minimize the noise level.
2. Receiver radiated emissions were done on both 850/1900 bands, but only worst-case plots are submitted in the test reports.
