

Operational Description

The EUT is a low power 125 kHz transceiver using loop coil antenna.

The EUT is powered from AC Adapter (output :DC12V).

The EUT is Power ON and operate continuously in TRANSMITTING and READING mode for recognizing RF ID CARD.

RF ID CARD is approached to the EUT and then EUT verifies the identification of the CARD. The EUT will only be marketed to corporations. It works in conjunction with security systems in offices and factories.
