Re: GUIDANCE ON SOFTWARE OR NETWORK CONFIGURATION OF NON-SDR DEVICES TO ENSURE COMPLIANCE

XetaWave radios require professional installation.

All parameters are set, and password protected, at the factory prior to shipment.

Professional installers may adjust operating parameters within the FCC specified limits The radio software will assure that adjustments will not cause FCC rule violations including minimum and maximum absolute Frequency of operation, minimum number of hopping channels, minimum channel spacing and, dwell time. The radio software does not allow parameters to be set outside of the approved limits.
