

- 2) Please note that per RSS-Gen, section 6.13.2 and FCC 15.33, the lowest frequency to investigate (including radiated) is less than 30 MHz and should include measurements < 30 MHz. (block diagram shows a 32 kHz oscillator). Please review.

Please note that this device is used exclusively in a transportation vehicle. Per FCC Part 15.103 (a) and correspondence with ISED Canada, digital devices used in a transportation vehicle are exempted from the specific technical standards of this part. Please note the 32kHz clock crystal referenced in this application is employed solely by the device's digital functionality, and therefore is not subject. Any emission observed below RF reference oscillator frequency (48 MHz) would be considered digital and exempt from regulation.
