Applicant Information:

SEWON TELECOM
15Fl., Sewon Venture Town Bldg.,
705-18, Yeuksam-dong, Kangnam-gu
Seoul 135-080, Korea

FCC ID:	PFZSWC-2001W
Model(s):	SWC-2001W
Equipment Type:	Dual Mode AMPS/CDMA Cellular Phone
FCC Classification:	Licensed Non-Broadcast Transmitter Held to Ear (TNE)
FCC Rule Part(s):	2.1093; ET Docket 96.326
Tx Frequency Range:	824.04 - 848.97 MHz (AMPS) 824.70 - 848.31 MHz (CDMA)
Rx Frequency Range:	869.04 - 893.97 MHz (AMPS) 869.70 - 893.31 MHz (CDMA)
Max. RF Output Power:	0.171 Watts ERP (AMPS) 0.146 Watts ERP (CDMA)

This wireless mobile and/or portable device has been shown to be compliant for localized Specific Absorption Rate (SAR) for uncontrolled environment/general exposure limits specified in ANSI/IEEE Std. C95.1-1992 and has been tested in accordance with the measurement procedures specified in ANSI/IEEE Std. C95.3-1999.

I attest to the accuracy of data. All measurements were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

Celltech Research Inc. certifies that no party to this application has been denied FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. 853(a).

Shawn McMillen
General Manager

1.0 INTRODUCTION

This measurement report shows that the SEWON TELECOM Model: SWC-2001W Dual-Mode AMPS/CDMA Cellular Phone FCC ID: PFZSWC-2001W complies with FCC Part 2.1093, ET Docket 96-326 Rules for mobile and portable devices. The test procedures, as described in American National Standards Institute C95.1-1992 (1), FCC OET Bulletin 65-1997 were employed. A description of the product and operating configuration, detailed summary of the test results, methodology and procedures used in the evaluation, equipment used, and the various provisions of the rules are included within this test report.

2.0 DESCRIPTION of Equipment Under Test (EUT)

EUT Type	Dual-Mode Cellular Phone	FCC ID	PFZSWC-2001W
FCC Equipment Class	Licensed Non-Broadcast Transmitter Held to Ear (TNE)	Model No.(s)	SWC-2001W
FCC Rule Part(s)	§ 2.1093, Docket 96-326	Application Type	Part 22 Certification
Tx Frequency Range (MHz)	824.04 - 848.97 (AMPS) 824.70 - 848.31 (CDMA)	S/N No.	Pre-production
Rx Frequency Range (MHz)	869.04 - 893.97 (AMPS) 869.70 - 893.31 (CDMA)	Max. RF Output Power	0.171 W ERP (AMPS) 0.146 W ERP (CDMA)
Modulation(s)	AMPS / CDMA	Battery Type(s)	3.6V Standard
Antenna Type	Stubby	Antenna Length	26 mm

3.0 SAR MEASUREMENT SYSTEM

Celltech Research SAR measurement facility utilizes the Dosimetric Assessment System (DASY™) manufactured by Schmid & Partner Engineering AG (SPEAG™) of Zurich, Switzerland. The DASY system is comprised of the robot controller, computer, near-field probe, probe alignment sensor, and the generic twin phantom containing brain or muscle equivalent material. The robot is a six-axis industrial robot performing precise movements to position the probe to the location (points) of maximum electromagnetic field (EMF). A cell controller system contains the power supply, robot controller, teach pendant (Joystick), and remote control, is used to drive the robot motors. The Staubli robot is connected to the cell controller to allow software manipulation of the robot. A data acquisition electronic (DAE) circuit performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection, etc. is connected to the Electro-optical coupler (EOC). The EOC performs the conversion from the optical into digital electric signal of the DAE and transfers data to the PC plug-in card. The DAE3 utilizes a highly sensitive electrometer-grade preamplifier with auto-zeroing, a channel and gain-switching multiplexer, a fast 16 bit AD-converter and a command decoder and control logic unit. Transmission to the PC-card is accomplished through an optical downlink for data and status information and an optical uplink for commands and clock lines. The mechanical probe-mounting device includes two different sensor systems for frontal and sidewise probe contacts. They are also used for mechanical surface detection and probe collision detection. The robot uses its own controller with a built in VME-bus computer.

DASY3 SAR Measurement System

4.0 MEASUREMENT SUMMARY

The measurement results were obtained with the EUT tested in the conditions described in this report. Detailed measurement data and plots showing the maximum SAR location of the EUT are reported in Appendix A.

HEAD SAR MEASUREMENT RESULTS

Freq. (MHz)	Channel	Mode	Conducted Power (dBm)	Battery Type	Antenna Position	Phantom Section	SAR (w/kg) 1g average
824.04	991	Unmod. Carrier	27.0	Standard	Fixed	Left Ear	1.34
836.49	383	Unmod. Carrier	27.5	Standard	Fixed	Left Ear	1.27
848.97	799	Unmod. Carrier	27.5	Standard	Fixed	Left Ear	1.09
824.70	1013	CDMA	26.0	Standard	Fixed	Left Ear	0.987
835.89	363	CDMA	26.0	Standard	Fixed	Left Ear	0.911
848.31	777	CDMA	26.0	Standard	Fixed	Left Ear	0.836
Mixture Type: BRAIN Dielectric Constant: 41.5 Conductivity: 0.90			ANSI / IEEE C95.1 1992 - SAFETY LIMIT Spatial Peak Uncontrolled Exposure/General Population BRAIN: 1.6 W/kg (averaged over 1 gram)				

Notes:

1. The SAR values found were below the maximum limit of 1.6 w/kg.
2. The highest head SAR value found was 1.34 w/kg.
3. The EUT was tested for head SAR using the standard battery, which is the only battery option for this phone.

Head SAR Test Setup

MEASUREMENT SUMMARY (CONT.)

BODY SAR MEASUREMENT RESULTS

Freq. (MHz)	Channel	Mode	Conducted Power (dBm)	Battery Type	Belt-Holster Separation Distance (cm)	Antenna Position	Phantom Section	SAR (w/kg) 1g average
824.04	991	Unmod. Carrier	27.0	Standard	1.0	Fixed	Flat	0.741
836.49	383	Unmod. Carrier	27.5	Standard	1.0	Fixed	Flat	0.679
848.97	799	Unmod. Carrier	27.5	Standard	1.0	Fixed	Flat	0.644
824.70	1013	CDMA	26.0	Standard	1.0	Fixed	Flat	0.526
835.89	363	CDMA	26.0	Standard	1.0	Fixed	Flat	0.482
848.31	777	CDMA	26.0	Standard	1.0	Fixed	Flat	0.420
Mixture Type: Muscle Dielectric Constant: 56.1 Conductivity: 0.95			ANSI / IEEE C95.1 1992 - SAFETY LIMIT Spatial Peak Uncontrolled Exposure/General Population BODY: 1.6 W/kg (averaged over 1 gram)					

Notes:

1. The SAR values found were below the maximum limit of 1.6 w/kg.
2. The highest body SAR value found was 0.741 w/kg.
3. The EUT was tested for body SAR placed in the belt-holster providing a 1.0cm separation distance between the back of the phone and the outer surface of the planar phantom.
4. The EUT was tested for body SAR using the standard battery, which is the only battery option for this phone.

Body SAR Test Setup

MEASUREMENT SUMMARY (CONT.)

HAND SAR MEASUREMENT RESULTS

Freq. (MHz)	Channel	Mode	Conducted Power (dBm)	Battery Type	Separation Distance (cm)	Antenna Position	Phantom Section	SAR (w/kg) 10g average
824.04	991	Unmod. Carrier	27.0	Standard	0.0	Fixed	Flat	1.08
824.70	1013	CDMA	26.0	Standard	0.0	Fixed	Flat	0.894
Mixture Type: Muscle Dielectric Constant: 56.1 Conductivity: 0.95			ANSI / IEEE C95.1 1992 - SAFETY LIMIT Spatial Peak Uncontrolled Exposure/General Population HAND: 4.0 W/kg (averaged over 10 grams)					

Notes:

1. The SAR values found were below the maximum limit of 4.0 w/kg.
2. The highest hand SAR value found was 1.08 w/kg.
3. The EUT was tested for hand SAR with the back of the phone touching the outer surface of the planar phantom.
4. The EUT was tested for hand SAR using the standard battery, which is the only battery option for this phone.

Hand SAR Test Setup

5.0 SAR SAFETY LIMITS

EXPOSURE LIMITS (General Population / Uncontrolled Exposure Environment)	SAR (W/Kg)
Spatial Average (averaged over the whole body)	0.08
Spatial Peak (averaged over any 1g of tissue)	1.60
Spatial Peak (hands/wrists/feet/ankles averaged over 10g)	4.00

Notes: 1. The FCC SAR safety limits specified in the table above apply to devices operated in the General Population / Uncontrolled Exposure environment.
2. Uncontrolled environments are defined as locations where there is exposure of individuals who have no knowledge or control of their exposure.

6.0 DETAILS OF SAR EVALUATION

The SEWON TELECOM Model: SWC-2001W Dual-Mode AMPS/CDMA Cellular Phone FCC ID: PFZSWC-2001W was found to be compliant for localized Specific Absorption Rate (SAR) based on the following test provisions and conditions:

- 1) The handset was placed in a normal operating position with the center of the ear-piece aligned with the ear canal on the phantom.
- 2) With the ear-piece touching the phantom the center line of the handset was aligned with an imaginary plane (X and Y axis) consisting of three lines connecting both ears and the mouth.
- 3) The handset was gradually moved towards the cheek until any point of the mouth-piece or keypad touched the cheek.
- 4) The EUT was tested in a body-worn configuration with the phone placed in the belt-holster, and the back of the phone facing parallel to the outer surface of the planar phantom. The belt-holster provided a 1.0cm separation distance between the back of the phone and the outer surface of the planar phantom.
- 5) The EUT was tested in a hand-held configuration with the back of the phone placed parallel to, and touching, the outer surface of the planar phantom.
- 6) SAR measurements were evaluated at maximum power and the unit was operated for an appropriate period prior to the evaluation in order to minimize drift. The conducted power levels were checked before and after each test.
- 7) The device was keyed to operate continuously in the transmit mode for the duration of the test.
- 8) The location of the maximum spatial SAR distribution (Hot Spot) was determined relative to the handset and its antenna.
- 9) The EUT was tested with a fully charged battery.

7.0 EVALUATION PROCEDURES

The Specific Absorption Rate (SAR) evaluation was performed in the following manner:

- a. (i) The evaluation was performed in an applicable area of the phantom depending on the type of device being tested. For devices held to the ear during normal operation, both the left and right ear positions were evaluated at the center frequency of the band at maximum power. The ear position that produced the greatest SAR determined which side of the phantom would be used for the entire evaluation. FCC OET Bulletin 65 Supplement C dictated the positioning of the ear-held device relative to the phantom.
(ii) For face-held and body-worn devices, or devices which can be operated within 20cm of the body, the planar section of the phantom was used. The type of device being evaluated determined the distance of the EUT to the outer surface of the planar phantom.
- b. The SAR was determined by a pre-defined procedure within the DASY3 software. Upon completion of a reference and optical surface check, the exposed region of the phantom was scanned near the inner surface with a grid spacing of 20mm x 20mm.
- c. For frequencies below 500MHz a 4x4x7 matrix was performed around the greatest spatial SAR distribution found during the area scan of the applicable exposed region. For frequencies above 500MHz a 5x5x7 matrix was performed. SAR values were then calculated using a 3-D spline interpolation algorithm and averaged over spatial volumes of 1 and 10 grams.
- d. If the EUT had any appreciable drift over the course of the evaluation, then the EUT was re-evaluated. Any unusual anomalies over the course of the test also warranted a re-evaluation.

8.0 SYSTEM VALIDATION

Prior to the assessment, the system was verified in the planar region of the phantom. For devices operating below 1GHz, an 835MHz dipole or 900MHz was used, depending on the operating frequency of the EUT. For devices operating above 1GHz, an 1800MHz dipole was used. A forward power of 250mW was applied to the dipole and system was verified to a tolerance of +3%. The applicable verification(s) is/are as follows (see Appendix B for validation test plot):

Dipole Validation Kit	Target SAR 1g (w/kg)	Measured SAR 1g (w/kg)
D835V2	2.06	2.02

9.0 SIMULATED TISSUES

The brain and muscle mixtures consist of a viscous gel using hydroxethylcellulose (HEC) gelling agent and saline solution. Preservation with a bactericide is added and visual inspection is made to ensure air bubbles are not trapped during the mixing process. The fluid was prepared according to standardized procedures, and measured for dielectric parameters (permittivity and conductivity).

INGREDIENT	MIXTURE – 835MHz		
	Brain % (Validation)	Brain %	Muscle %
Water	40.1	41.45	52.4
Sugar	58.1	56.0	45.0
Salt	0.7	1.45	1.4
HEC	1.0	1.0	1.0
Bactericide	0.1	0.1	0.2

10.0 TISSUE PARAMETERS

The dielectric parameters of the fluids were verified prior to the SAR evaluation using an 85070C Dielectric Probe Kit and an 8753E Network Analyzer. The dielectric parameters of the fluid are as follows:

Equivalent Tissue (835MHz)	Dielectric Constant ϵ_r	Conductivity s (mho/m)	ρ (Kg/m ³)
Brain (Validation)	44.2 $\pm$ 5%	0.80 $\pm$ 10%	1000
Brain	41.5 $\pm$ 5%	0.90 $\pm$ 10%	1000
Muscle	56.1 $\pm$ 5%	0.95 $\pm$ 10%	1000

11.0 ROBOT SYSTEM SPECIFICATIONS

Specifications

POSITIONER: Stäubli Unimation Corp. Robot Model: RX60L
Repeatability: 0.02 mm
No. of axis: 6

Data Acquisition Electronic (DAE) System

Cell Controller

Processor: Pentium III
Clock Speed: 450 MHz
Operating System: Windows NT
Data Card: DASY3 PC-Board

Data Converter

Features: Signal Amplifier, multiplexer, A/D converter, and control logic
Software: DASY3 software
Connecting Lines: Optical downlink for data and status info.
Optical uplink for commands and clock

PC Interface Card

Function: 24 bit (64 MHz) DSP for real time processing
Link to DAE3
16 bit A/D converter for surface detection system
serial link to robot
direct emergency stop output for robot

E-Field Probe

Model: ET3DV6
Serial No.: 1387
Construction: Triangular core fiber optic detection system
Frequency: 10 MHz to 6 GHz
Linearity: ± 0.2 dB (30 MHz to 3 GHz)

Phantom

Phantom: Generic Twin
Shell Material: Fiberglass
Thickness: 2.0 $\pm$ 0.1 mm

Device positioning	± 6 %	Normal	1	± 6 %	
Combined Uncertainties				± 11.7 %	± 5 %

Measurement uncertainties in SAR measurements are difficult to quantify due to several variables including biological, physiological, and environmental. However, the estimated measurement uncertainties in SAR are less than 15-25 %.

According to ANSI/IEEE C95.3, the overall uncertainties are difficult to assess and will vary with the type of meter and usage situation. However, accuracy's of ± 1 to 3 dB can be expected in practice, with greater uncertainties in near-field situations and at higher frequencies (shorter wavelengths), or areas where large reflecting objects are present. Under optimum measurement conditions, SAR measurement uncertainties of at least ± 2 dB can be expected.

According to CENELEC, typical worst-case uncertainty of field measurements is ± 5 dB. For well-defined modulation characteristics the uncertainty can be reduced to ± 3 dB.
