User Manual

Operation

(This product will turn off when combined ; turn on when separated)

- When separated , the receiver will sound one long beep and follows one long & one short beeps, the LED on both receiver side and transmitter side will flash synchronously, then you can begin to use them. (When they cannot flash synchronously, it means this turn on procedure is fail, please repeat this operation 1. Again!).
- Under normal operation, when the effective distance (about 5 to 10 meters) between the receiver and the transmitter is exceeded, the receiver's alarm will alert continuously per second .
- When the distance between the receiver and the transmitter is shorten to the effective distance, the alarm will stop alerting immediately .
- Setting tracer function: under effective distance, hold the transmitter key, the receiver's alarm will alert continuously per second until the transmitter key is released.

Important information

- When turn on the product, the distance between the receiver and the transmitter must exceed 30cm to proceed the linking-code procedure.
- To extend battery life, be sure to turn off the product (combine status) when it is not in use.
- The effective distance may be diminished by environmental conditions such as walls, metal objects, relative humidity and other radio signals. (we use 315MHZ).
- Keep this product away from water and avoid been crashed.

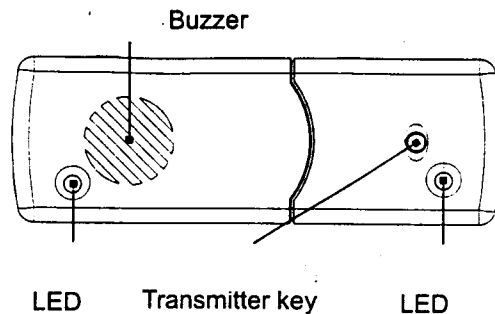

Trouble shooting

- Change the battery as soon as possible when LED goes on. (Lithium battery CR2032) .
- Check for any nearby source of interference. Try to get rid of it or move away from the source .
- If none of the above works, return unit to factory as per warranty. Do not attempt to repair it by yourself.
