

Circuit Description (BH5 and XEU58 Series)

The lamps are connected into 120V AC 60Hz power supply system. L0, C1 and C0 to execute EMI function. D1, D2, D3 and D4 execute rectification function. DB3 triggers T1 to ON status and lead Tr1, Tr2, Tr3 to work .Tr1, Tr2, Tr3 drivers T1, T2 working in switch ON/OFF status. Then C4, C41, C5, C51, C6, C7, L1 will resonate and drive fluorescent tube working.
