Columbia MD 21046

Attention: Mr. Steven Dayhoff

Date : 27 April 2001

Subject : Confirmation on AMPS output power

Reference: Application: Cyberbank Corp.

FCC ID: PGVCB-0800

FCC Confirmation No:EA99938

Dear Mr. Dayhoff:

This letter is to address the discrepancy in measured RF power output during the FCC Part 22.913 test and the RF power output used during SAR Tests.

As indicated in the test report, the measured RF power output is 0.65W. However, during the SAR tests, the RF power output used is 0.35W..

In order to comply with FCC SAR technical requirements and provide a consistency in the reporting requirements. Cyberbank Corp. is agreed to reduce the AMPS output power to 0.35W. Cyberbank Corp. will follow the Tune-Up procedures to ensure the every unit sold in the US will comply with the maximum allowable power for AMPS modulation.

It is acknowledged by Cyberbank Corp. that in the event the RF power output is changed after the Grant of Authorization is issued, a new application for equipment authorization will be filed to the Commission.

Best Regards
