Hello Chris,

Thank you for your comment.  
I was informed by our RF Engineer like below for this project.

We used spectrum analyzer to measure output power with RBW=VBW=3MHz, Detector Mode=Peak and Trace=Maxhold.

We actually followed Method #1, but didn't use 1 MHz of RBW, because we thought 1 MHz of RBW is too small to measure WLAN device.

So, according your comment, we re-measured the output power. I'm sorry to make confuse you.

If you have more comments, please let me know asap.

Best Regards,  
SunHee Kim
