SAFETY PRECAUTIONS

1. Avoid placing the phone in a dusty location, or near a source of gas or fire.
2. Don't Shake, hit or drop the phone.
3. To clean the outside of the phone, use only a soft, dry cloth. The chemicals in alcohol, benzene or acetone can damage the surface of the phone.
4. Do not twist or pull the cord out of the phone.
5. Do not disassemble the phone.
6. Do NOT use the power adaptor if:
 - The power cord is damaged.
 - The phone has been dropped or damaged in any way.
7. Use only the AXESSTEL provided adaptor for the phone. Do not use the AXESSTEL adaptor for any other purpose.
8. Use only the AXESSTEL provided antenna. Do not use the antenna for any other purpose.
9. Frequency and length of use can affect the life of the self-charging battery. Contact your customer service if the battery is not operating properly.
10. Use only the designated self-charging battery. Dispose of exhausted batteries properly. Never discard a battery in or near fire or flame.
11. Do not place the telephone near water, for example, near a bathtub, sink, wet basement, or swimming pool.

NOTE 1: The input and output voltages are indicated on the adapter.
(Input: AC 100~240V, 50~60 Hz, Output: DC 5V, 1A)

NOTE 2: Do not insert or eject SIM card while the phone is powered on.

CHECKING THE PARTS

After unpacking your phone, make sure that you have all the parts shown below. If any piece is missing or broken, please call your customer service center.

1. Handset
2. Cradle
3. User Manual

4. Power Adaptor
5. Battery

SETTING UP YOUR PHONE

Installing SIM card

- 1. Remove SIM bracket cover.
- 2. Insert proper SIM card.
- 3. Put the bracket back in place.
- 4. Close the cover.

USING SIM CARD FOR THE FIRST TIME

1. Entering PIN code.

NOTE1: The PIN feature function can be set on/off in Change PIN code menu.

NOTE2: Change PIN code menu can be visible after you enable in PIN code request menu.

2. If an incorrect PIN code is entered, an error message displays.

NOTE: There are 3 chances to enter the correct PIN code. If incorrect PIN codes are entered 3 times, the SIM card will be locked. To unlock the SIM card, contact your service provider.

3. The phone is ready to use after entering the correct PIN code.

* Default PIN code is provided by your service provider.

Installing the phone

This phone operates by receiving DC power from the AXESSTEL power adaptor, which connects to an electrical outlet. The phone is equipped with a rechargeable battery as a back up in case of an AC power failure.

Desktop installation

1 Place the Cradle on the Flat Area

2 Plug the Power adaptor into an appropriate Wall outlet

3 Place the Handset on the Cradle.

4 To turn on the Phone, Press END Key and hold
The Power On Image will be displayed

Service Status Check

Display in the Service Area

When the phone's power is turned on, LCD will display Power ON Image while the phone loads information from SIM card. After the loading is finished, LCD will display greeting with date and time. The number of bars of signal strength indicator (antenna icon) indicates the strength of service signal of the area.

Display in area with no service

When there is no service signal detected in your area, no antenna bar appears. Contact your service provider for the coverage area information.

Also move to find better signal areas.

GETTING TO KNOW YOUR PHONE

1. **Menu:** Press to access the phone's menus.
2. **Call Log:** Press to access the Call log sub menu directly.
3. **Calendar:** Press to access the Calendar menu directly.
4. **Contact:** Press to access the Contacts sub menu directly.
5. **Speaker:** Press to activate "Speaker Phone" function.
6. **Message:** Press to access the Messages menu directly.
7. **End:** End or Reject the Call.
8. **Sound:** Press to access the Sound menu directly.
9. **Talk:** Call to the dialled number or Answer the Call.

DISPLAY ICONS

Icons display on the screen to indicate what features you are using, signal strength and battery status etc...

Indicate the strength of the signal. More bars indicates stronger signal.

Indicates the level of battery power. The more bars, the more power. When the battery is low, the icon blinks, and an alert tone sounds.

Indicates that all calls are diverted

Indicates that the alarm has been set.

Indicates that you have text message.

Indicates that you have a voice mail message.

Indicates that a voice call is in progress.

FUNCTION KEYS

-  Press this key to display the phone's main menu.
-  Press this key to access the Calendar menu directly.
-  Press this key to access the Messages menu directly.
-  Press this key to access the Contacts sub menu directly.
-  Press this key to access the Call log sub menu directly.
-  Press this key to access the Sound menu directly.
-  In Idle state, It is working as The Speaker button that is used to place or receive a call without using the handset. The integrated microphone and speaker on the Main unit allows hands free conversation.
In Sub menu, It is working as the select key.

Basic Operation

Making Calls
Redial
Receiving Calls
Adjusting Volumes
Choosing the Ring Tones
Message Service

	4) Call	Call number, Call waiting, Minute minder, Auto redial	Sets call related functions.
	5) Call divert	Always, When no answer, When busy, When not reachable, Cancel all	Sets to forward incoming calls to another number.
	6) Call barring	Incoming calls, Incoming calls if abroad, outgoing calls, Foreign outgoing calls, Only local and home country, Cancel all	Sets to prohibit the call from someone who you do not want to talk.
	7) Network band select	GSM900/1800, GSM850/1900, GSM850/900/1800/1900	Sets bands you want to use. Be careful in changing. It could cause no service with wrong setting.
	8) Security	PIN code request, Phone lock, Change PIN2 code, Change phone lock code, Handset call barring, Fixed dialing	Sets to protect your phone to be used illegally.
	9) Reset settings	Yes, No	Returns to factory setting but User data is not erased.

SPECIFICATIONS

Frequency Range	PG430	850 : TX 824 ~ 849 , RX 869 ~ 894 900 : TX 880 ~ 915 , RX 925 ~ 960 1800 : TX 1710 ~ 1785, RX 1805 ~ 1880 1900 : TX 1850 ~ 1910, RX 1930 ~ 1990
Channel Bandwidth	850 / 900 / 1800 / 1900 Quad Band	
Stability of frequency	0.1 ppm	
External appearance (mm)	48 x 152 x 23 mm	
Weight	110g(Handset with standard battery), 90g(Cradle)	
Sending output	maximum 1W E.R.P(1800/1900) maximum 2W E.R.P(850/900)	
Temperature of operation	-10 ~ +50 degrees Celcius	
Relative humidity	10% ~ 95%	
Adapter	Input: AC 100~240V 50~60Hz Output: DC 5V/600mA	
Battery	Standby	120 Hours
	Talk	3 Hours

CAUTION
RISK OF EXPLOSION IF BATTERY IS REPLACED
BY AN INCORRECT TYPE.
DISPOSE OF USED BATTERIES ACCORDING
TO THE INSTRUCTIONS

CONFORMANCE STATEMENTS

SAR INFORMATION

THIS MODEL PHONE MEETS THE GOVERNMENT'S REQUIREMENTS FOR EXPOSURE TO RADIO WAVES.

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency(RF) energy set by the Federal Communications Commission of the U.S.Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population.

The guidelines are based on standards that were developed by independent scientific

Organizations through periodic and thorough evaluation of scientific studies. The standards

include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. *

Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna,

The lower the power output. Before a phone model is available for sale to the public, it

must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model.

The highest SAR value for this model phone when tested for use at the when worn on the body and head,

as described in this user guide, is **1.43 W/Kg** . While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on **FCC ID: PH7PG430**.

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is

1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

SAFETY INFORMATION FOR RF EXPOSURE

Body worn operation

This device was tested for typical body-worn operations with the back of the phone kept 25 mm. from the body. To maintain compliance with FCC RF exposure requirements, use only belt-clips, holsters or similar accessories that maintain a 25 mm. separation distance between the user's body and the back of the phone, including the antenna. The use of belt-clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

Safety Information

1 . SAFETY INFORMATION FOR FIXED WIRELESS TERMINALS

.POTENTIALLY EXPLOSIVE ATMOSPHERES

Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

.INTERFERENCE TO MEDICAL DEVICES

Certain electronic equipment may be shielded against RF signal from you wireless phone. (pacemakers, Hearing Aids, and so on) Turn your phone OFF in health care facilities when any regulations posted in these areas instruct you to do so. RF signals may affect improperly installed or inadequately shielded electronic system in motor vehicles.

.EXPOSURE TO RF ENERGY

Use only the supplied or an approved replacement antenna. Do not touch the antenna unnecessarily when the phone is in use. Do not move the antenna close to, or touching any exposed part of the body when making a call.

FCC Compliance Information

This device complies with Part 15 of FCC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received.

Including interference that may cause undesired operation.

U.S.A.

U.S.FEDERAL COMMUNICATIONS COMMISSION

RADIO FREQUENCY INTERFERENCE STATEMENT

INFORMATION TO THE USER

NOTE : This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- *- Reorient or relocate the receiving antenna.
- *- Increase the separation between the equipment and receiver.
- *- Connect the equipment into an outlet of a circuit different from that to which the receiver is connected.
- *- Consult the dealer or an experienced radio/TV technician for assistance.

Changes or modification not expressly approved by the party responsible for Compliance could void the user's authority to operate the equipment. Connecting of peripherals requires the use of grounded shielded signal cables

Caution

Modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
