Subject: Class II Permissive Change

Reference: FCC ID: PI401B

Our Ref: LT -Class II Permissive Change- 01\rg

Dear Sir / Madam,

This class II permissive change filing covers a new model, which changes the layout of the PCB. The alteration to the layout of this module does not affect active parts of the circuit, as these remain identical to the original filing. The circuit board is simply elongated. The only possible change to the reported characteristics is deemed to be that of radiated spurious emissions. These characteristics have been reported in the supplied test report.

Yours sincerely

Robert Graham  
Principal Engineer
