

**TEST REPORT
FROM
RFI GLOBAL SERVICES LTD**

Test of: Ezurio Ltd
Wireless LAN Module

To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

Test Report Serial No:
RFI/RPTE1/RP48844JD05A

**This Test Report Is Issued Under The Authority
Of Andrew Brown, Operations Manager:**

pp. 

Tested By: Petr Hajek

pp 

Checked By: Michael Derby

Report Copy No: PDF01

Issue Date: 12 December 2006

Test Dates: 28 November 2006 to 30 November 2006

This report is issued in Adobe Acrobat portable document format (PDF). It is only a valid copy of the report if it is being viewed in PDF format with the following security options not allowed: Changing the document, Selecting text and graphics, Adding or changing notes and form fields.

This report may be copied in full. The results in this report apply only to the sample(s) tested.

Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

Table of Contents

1. Client Information 4
2. Equipment Under Test (EUT) 5
3. Test Results 9
4. Deviations from the Test Specification 10
5. Operation of the EUT during Testing 11
6. Summary of Test Results 12
7. Measurements, Examinations and Derived Results 13
8. Measurement Uncertainty 33
9. Measurement Methods 34
Appendix 1. Test Equipment Used 38
Appendix 2. Test Configuration Drawings 39

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

1. Client Information

Company Name:	Ezurio Ltd
Address:	Saturn House Mercury Park Wycome Lane Woodburn Green Bucks HP10 0HH UK
Contact Name:	Mr T Wheatley

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

2. Equipment Under Test (EUT)

The following information (with the exception of the Date of Receipt) has been supplied by the client:

2.1. Identification of Equipment Under Test (EUT)

Description:	Wireless LAN Module
Brand Name:	WISM
Model Name or Number:	WISMC01BI
Hardware Revision:	01
Software Revision:	1.3.6.3
FCC ID Number:	PI405W
Country of Manufacturer:	None stated
Date of Receipt:	28 November 2006

2.2. Description of EUT

The equipment under test is a module that provides WLAN connectivity for machine to machine communication.

The module has a UART interface that allows control of the WLAN functionality and is used to transfer data to and from the host system.

2.3. Modifications Incorporated in EUT

During the course of testing the EUT was not modified.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

2.4. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Interface Test Board
Brand Name:	Ezurio
Model Name or Number:	B47DR05
Serial Number:	REV 02
Cable Length and Type:	15 cm, Multicore
Connected to Port:	Multipin connector on EUT

Description:	Serial Cable
Brand Name:	None Stated
Model Name or Number:	None Stated
Serial Number:	None Stated
Cable Length and Type:	2.0 m, RS232
Connected to Port:	RS232 port on test board, to RS232-USB cable

Description:	RS232-USB cable
Brand Name:	None Stated
Model Name or Number:	None Stated
Serial Number:	None Stated
Cable Length and Type:	1.0m, shielded multicore
Connected to Port:	RS232 cable to Laptop USB port

Description:	Laptop PC
Brand Name:	IBM
Model Name or Number:	R50E
Serial Number:	L3-PVGM5 05/05
Cable Length and Type:	1.0 m USB-RS232 cable
Connected to Port:	USB port to RS232 cable

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

The following support equipment was used to exercise the EUT during testing (continued):

Description:	DC power supply
Brand Name:	Alpha Micro
Model Name or Number:	LMP043
Serial Number:	None stated
Cable Length and Type:	2.0m, unshielded 2-core
Connected to Port:	DC Input of the Interface Test Board

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

2.5. Additional Information Related to Testing

Power Supply Requirement:	DC Supply of 3.6 V		
Intended Operating Environment:	Commercial		
Equipment Category:	802.11b 802.11g		
Type of Unit:	Mobile (Vehicular Use, powered via vehicle regulated supply) Portable (Standalone battery powered device) Transceiver		
Transmit Frequency Range:	2.412 GHz to 2.472 GHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (GHz)
	Bottom	1	2.412
	Middle	6	2.437
	Top	11	2.462
Receive Frequency Range:	2.412 GHz to 2.472 GHz		
Receive Channels Tested:	Channel ID	Channel Number	Channel Frequency (GHz)
	Bottom	1	2.412
	Middle	6	2.437
	Top	11	2.462
Maximum Peak Power Output (EIRP):	18 dBm (802.11b) 16 dBm (80211g)		

2.6. Port Identification

Port	Description	Type/Length	Applicable
1	Main Connector	40 Way Hirose	Yes

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

3. Test Results

Reference:	FCC Part 15.247: 2005 Subpart C
Title:	Code of Federal Regulations, Part 15.247 (47CFR15) (Intentional Radiators operating within the bands 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz)

3.1. Methods and Procedures

The methods and procedures used were as detailed in:

ANSI/TIA-603-B-2003

Land Mobile Communications Equipment, Measurements and performance Standards

ANSI C63.2 (1987)

Title: American National Standard for Instrumentation - Electromagnetic noise and field strength.

ANSI C63.4 (2003)

Title: American National Standard Methods of Measurement of Electromagnetic Emissions from Low Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz.

ANSI C63.5 (1988)

Title: American National Standard for the Calibration of antennas used for Radiated Emission measurements in Electromagnetic Interference (EMI) control.

ANSI C63.7 (1988)

Title: American National Standard Guide for Construction of Open Area Test Sites for performing Radiated Emission Measurements.

CISPR 16-1: (1999)

Title: Specification For Radio Disturbance and Immunity Measuring Apparatus and Methods. Part 1: Radio Disturbance and Immunity Measuring Apparatus.

3.2. Definition of Measurement Equipment

The measurement equipment used complied with the requirements of the standards referenced in the methods & procedures section above. Appendix 1 contains a list of the test equipment used.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

4. Deviations from the Test Specification

At the request of the client, only the spurious emissions tests were performed.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

5. Operation of the EUT during Testing

5.1. Operating Modes

The EUT was tested in the following operating modes, unless otherwise stated:

The module was supplied and tested with manufacturing test firmware which allows control of modulation, output power and duty cycle.

The module had been previously tested and from the previous tests, the client was able to state that 802.11b operation with BPSK modulation gave the worst case emissions. For this reason, the client requested that we perform these emissions tests in that mode.

5.2. Configuration and Peripherals

The EUT was tested in the following configuration:

The EUT was tested stand-alone, connected to a test jig board by a communication cable of greater than 10 cm in length. A laptop was used to configure the mode of operation before making measurements.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

6. Summary of Test Results

Range of Measurements	Specification Reference	Port Type	Compliance Status
Idle Mode AC Conducted Emissions	Section 15.107	AC Mains	Complied
Idle Mode Radiated Spurious Emissions	Section 15.109	Antenna	Complied
Transmitter AC Conducted Emissions	Section 15.207	AC Mains	Complied
Transmitter Radiated Emissions	Sections 15.247(d) & 15.209(a)	Antenna	Complied
Transmitter Band Edge Radiated Emissions	Sections 15.247(d) & 15.209(a)	Antenna	Complied

6.1. Location of Tests

All the measurements described in this report were performed at the premises of RFI Global Services Ltd, Ewhurst Park, Ramsdell, Basingstoke, Hampshire, RG26 5RQ.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

7. Measurements, Examinations and Derived Results

7.1. General Comments

This section contains test results only.

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to section 8 for details of measurement uncertainties.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

7.2. Test Results

7.2.1. Receiver AC Conducted Spurious Emissions: Section 15.107

The EUT was configured for ac conducted emission measurements, as described in section 9 of this report. Tests were performed to identify the maximum emission levels present on the ac mains line of the EUT.

Results:

Quasi-Peak Detector Measurements on Live and Neutral Lines

Frequency (MHz)	Line	Level (dB μ V)	Limit (dB μ V)	Margin (dB)	Result
0.154	Neutral	36.0	65.8	29.8	Complied
0.186	Neutral	33.7	64.2	30.5	Complied
0.198	Neutral	33.3	63.7	30.4	Complied
0.254	Neutral	31.7	61.6	29.9	Complied
0.270	Neutral	31.2	61.1	29.9	Complied
0.298	Neutral	30.0	60.3	30.3	Complied
0.346	Neutral	28.3	59.1	30.8	Complied
0.642	Neutral	23.9	56.0	32.1	Complied
0.714	Neutral	24.1	56.0	31.9	Complied
0.746	Neutral	23.3	56.0	32.7	Complied

Average Detector Measurements on Live and Neutral Lines

Frequency (MHz)	Line	Level (dB μ V)	Limit (dB μ V)	Margin (dB)	Result
See Note 1 Below					

Note(s):

1. All quasi-peak levels were below the average limit.
2. 802.11b, BPSK mode tested.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

Receiver AC Conducted Spurious Emissions: Section 15.107 (Continued)

Note: This plot is a pre-scan and for indication purposes only. For final measurements, see accompanying tables.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

7.2.2. Receiver Radiated Spurious Emissions: Section 15.109

The EUT was configured for radiated emission testing, as described in section 9 of this report.

Tests were performed to identify the maximum receiver or standby radiated emission levels.

Results:

Electric Field Strength Measurements (Frequency Range: 30 MHz to 1000 MHz)

Frequency (MHz)	Antenna Polarity	Q-P Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
117.970	Vertical	27.2	43.5	16.3	Complied
159.990	Vertical	23.5	43.5	20.0	Complied
176.940	Horizontal	31.3	43.5	12.2	Complied
206.440	Horizontal	29.5	43.5	14.0	Complied
235.930	Horizontal	29.7	46.0	16.3	Complied
239.980	Vertical	31.0	46.0	15.0	Complied
294.900	Horizontal	30.0	46.0	16.0	Complied
320.010	Horizontal	33.3	46.0	12.7	Complied
324.410	Horizontal	33.8	46.0	12.2	Complied
353.860	Horizontal	33.2	46.0	12.8	Complied
383.380	Horizontal	33.4	46.0	12.6	Complied
530.890	Vertical	38.9	46.0	7.1	Complied

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

Receiver Radiated Spurious Emissions: Section 15.109 (Continued)

Note: This plot is a pre-scan and for indication purposes only. For final measurements, see accompanying tables.

Test of: Ezurio Ltd
Wireless LAN Module
To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

7.2.3. Receiver Radiated Spurious Emissions: Section 15.109

Results:

Electric Field Strength Measurements (Frequency Range: 1 GHz to 12.5 GHz)

Highest Peak Level:

Frequency (GHz)	Antenna Polarity	Detector Level (dB μ V)	Transducer Factor (dB)	Actual Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
12.42786	Vertical	39.8	4.1	43.9	54.0	10.1	Complied

Note(s):

- No spurious emissions were detected above the noise floor of the measuring receiver; therefore, the highest peak noise floor reading of the measuring receiver was recorded as shown in the table above. The peak level was compared to the average limit as opposed to being compared to the peak limit because this is the more onerous limit.*
- 802.11b, BPSK mode tested.*
- All emissions were more than 10 dB below the limit.*

7.2.4. Transmitter AC Conducted Spurious Emissions: Section 15.207

The EUT was configured for ac conducted emission measurements, as described in section 9 of this report. Tests were performed to identify the maximum emission levels present on the ac mains line of the EUT.

Results:

Quasi-Peak Detector Measurements on Live and Neutral Lines

Frequency (MHz)	Line	Level (dB μ V)	Limit (dB μ V)	Margin (dB)	Result
0.154	Neutral	39.8	65.8	26.0	Complied
0.178	Neutral	37.8	64.6	26.8	Complied
0.206	Neutral	36.9	63.4	26.5	Complied
0.246	Neutral	35.7	61.9	26.2	Complied
0.262	Neutral	35.1	61.4	26.3	Complied
0.298	Neutral	33.7	60.3	26.6	Complied
0.346	Neutral	31.9	59.1	27.2	Complied
0.382	Neutral	29.5	58.2	28.7	Complied
0.630	Neutral	26.8	56.0	29.2	Complied
0.710	Neutral	27.2	56.0	28.8	Complied

Average Detector Measurements on Live and Neutral Lines

Frequency (MHz)	Line	Level (dB μ V)	Limit (dB μ V)	Margin (dB)	Result
See Note 3 Below

7.2.5. Transmitter Radiated Emissions: Section 15.247(d) and 15.209(a)

The EUT was configured for radiated emission testing, as described in section 9 of this report.

Tests were performed to identify the maximum transmitter radiated emission levels.

Results:

Electric Field Strength Measurements: 30 MHz to 1000 MHz (emissions occurring in the restricted bands)

Top Channel

Frequency (MHz)	Antenna Polarity	Q-P Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
117.470	Vertical	24.5	43.5	19.0	Complied

(Requested Parts Only)

7.2.6. Transmitter Radiated Emissions: Section 15.247(d) and 15.209(a)

The EUT was configured for radiated emission testing, as described in section 9 of this report.

Tests were performed to identify the maximum transmitter radiated emission levels.

Results:

Electric Field Strength Measurements: 30 MHz to 1000 MHz (emissions outside the restricted bands)

Top Channel

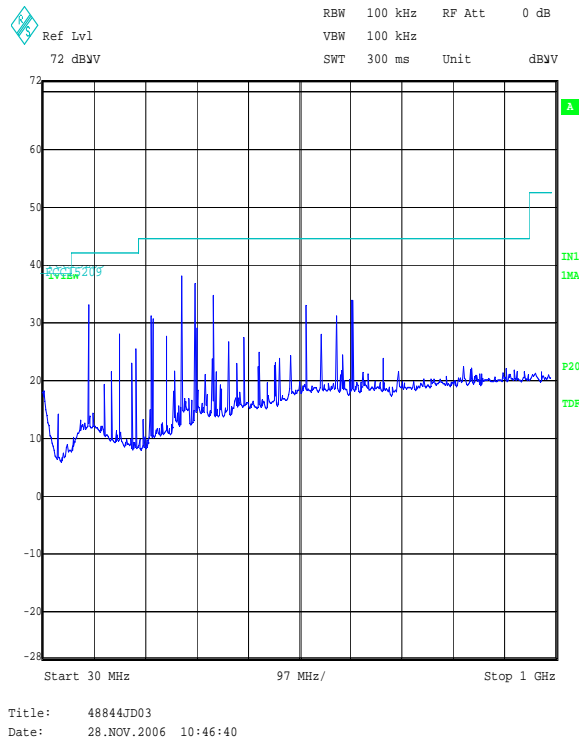

Frequency (MHz)	Antenna Polarity	Peak Level (dB μ V/m)	-20 dBc Limit (dB μ V/m)	Margin (dB)	Result
159.990	Vertical	32.8	71.2	38.4	Complied

7.2.8. Transmitter Band Edge Radiated Emissions: Section 15.247(d) & 15.209(a)

The EUT was configured for band edge compliance of radiated emission measurements, as described in section 9 of this report.

Tests were performed to identify the maximum radiated band edge emissions.

Results:

Electric Field Strength Measurements

Peak Power Level:

Frequency (GHz)	Antenna Polarity	Detector Level (dB μ V)	Transducer Factor (dB)	Actual Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
2.4000	Vertical	63.3	-11.4	51.9	71.2*	19.3	Complied
2.4835	Vertical	54.6	-11.0	43.6	74.0	10.4	Complied

Note(s):

1. * -20 dBc limit.
2. The band edge level at 2.4835 GHz lies within a restricted band.
3. 802.11b, BPSK mode tested

Test of: Ezurio Ltd

To: FCC Part 15.247: 2006 (Subpart C)
(Requested Parts Only)

7.2.9. Transmitter Band Edge Radiated Emissions: Section 15.247(d) & 15.209(a)(Continued)

The EUT was configured for band edge compliance of radiated emission measurements, as described in section 9 of this report.

Tests were performed to identify the average radiated band edge emissions.

Results:

Average Power Level Static Mode:

Frequency (GHz)	Antenna Polarity	Detector Level (dB μ V)	Transducer Factor (dB)	Actual Level (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)	Result
2.4835	Vertical	42.8	-11.0	31.8	54.0	22.2	Complied

Note(s):

- 1. The band edge level at 2.4835 GHz lies within a restricted band.*
- 2. 802.11b, BPSK mode tested*

8. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently, the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor, such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±3.72 dB
Radiated Spurious Emissions	30 MHz to 1000 MHz	95%	±4.64 dB
Radiated Spurious Emissions	1 GHz to 40 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty, the published guidance of the appropriate accreditation body is followed.

9. Measurement Methods

9.1. AC Mains Conducted Emissions

AC mains conducted emissions measurements were performed in accordance with the standard, against appropriate limits for each detector function.

The test was performed in a shielded enclosure with the equipment arranged as detailed in the standard on a wooden bench using the floor of the screened enclosure as the ground reference plane. The EUT was powered with 110V 60 Hz ac mains supplied via a line impedance stabilisation network (LISN).

Initial measurements in the form of swept scans covering the entire measurement band were performed in order to identify frequencies on which the EUT was generating interference. In order to minimise the time taken for these swept measurements, a peak detector was used in conjunction with the appropriate detector IF measuring bandwidths (see table below). Repetitive scans were performed to allow for emissions with low repetition rates, and the duty cycle of the EUT. The test configuration was the same for the initial scans as for the final measurements.

Following the initial scans, a graph was produced giving an overview of the emissions from the EUT plotted against the appropriate specification limit. A tolerance line was set 6 dB below the specification limit and levels above the tolerance line were re-tested (at individual frequencies) using the appropriate detector function.

The test equipment settings for conducted emissions measurements were as follows:

Receiver Function	Initial Scan	Final Measurements
Detector Type:	Peak	Quasi-Peak (CISPR)/Average
Mode:	Max Hold	Not applicable
Bandwidth:	10 kHz	9 kHz
Amplitude Range:	60 dB	20 dB
Measurement Time:	Not applicable	>1 s
Observation Time:	Not applicable	>15 s
Step Size:	Continuous sweep	Not applicable
Sweep Time:	Coupled	Not applicable

9.2. Radiated Emissions

Radiated emissions measurements were performed in accordance with the standard, against appropriate limits for each detector function.

Initial measurements covering the entire measurement band in the form of swept scans in a shielded enclosure were performed in order to identify frequencies on which the EUT was generating interference. This determined the frequencies on which the EUT should be re-measured in full on the open area test site. In order to minimise the time taken for the swept measurements, a peak detector was used in conjunction with the appropriate detector IF measuring bandwidth (see table below). Repetitive scans were performed to allow for emissions with low repetition rates.

The initial scans were performed using an antenna height of 1.5 m and a measurement distance of 3 m. Following the initial scans, graphs were produced giving an overview of the emissions from the EUT plotted against the appropriate specification limit. Any emission within 20 dB of the limit were then measured on the open area test site, except in cases where the noise floor was within 20 dB of the limit, in these cases the highest point of the noise floor was measured.

Where an emission fell inside a restricted band, measurements were made at the appropriate test distance using a measuring receiver with a quasi peak detector for measurements below 1000 MHz and an average and peak detector for measurements above 1000 MHz. A peak detector was used for all other measurements.

For the final measurements the EUT was arranged on a non-conducting turn table on a standard test site compliant with ANSI C63.4 – 2003 Clause 5.4.

All measurements on the open area test site were performed using broadband antennas in both vertical and horizontal polarisations.

On the open area test site, at each frequency where a signal was to be measured, the trace was maximised by rotating a turntable through 360°. The angle at which the maximum signal was observed was locked out. For frequencies below 1000 MHz the test antenna was varied in height between 1 m and 4 m in order to further maximise the target emission.

For frequencies above 1000 MHz where a horn antenna was used, height searching was performed to locate the optimal height of the horn with respect to the EUT. At this point the horn was locked off and the turntable was again rotated through 360° to maximise the target signal. It should be noted that the received signal from the EUT would diminish very quickly after it exits the beam width of the horn antenna, for this reason it may not be necessary to fully height search with the horns.

Radiated Emissions (Continued)

At this point, any signals found to be between the limit and a level 6 dB below it were further maximised by changing the configuration of the EUT, e.g. re-routing cables to peripherals and moving peripherals with respect to the EUT.

Scans were performed to the upper frequency limits as stated in section 15.33

The final field strength was determined as the indicated level in dB μ V plus cable loss and antenna factor.

The test equipment settings for radiated emissions measurements were as follows:

Receiver Function	Initial Scan	Final Measurements <1 GHz	Final Measurements ≥1 GHz
Detector Type:	Peak	Quasi-Peak (CISPR)	Peak / Average
Mode:	Max Hold	Not applicable	Max Hold
Bandwidth:	(120 kHz <1 GHz) (1 MHz ≥1 GHz)	120 kHz	1 MHz
Amplitude Range:	100 dB	100 dB	100 dB
Step Size:	Continuous sweep	Not applicable	Not applicable
Sweep Time:	Coupled	Not applicable	Not applicable

9.3. Band Edge Compliance of RF Radiated Emissions

The EUT and spectrum analyser were configured as for radiated measurements.

To determine band edge compliance, the analyser resolution bandwidth was set to $\geq 1\%$ of the analyser span. The video bandwidth was set to be \geq to the resolution bandwidth. The sweep was set to auto and the detector to peak. The trace was set to max hold and a trace was produced.

A plot of the lower band edge of the allocated frequency band was produced. A marker was set to the level of the highest in band emission and a limit line set to 20 dB below this. The marker was then placed at the band edge.

The above procedure was then repeated for the upper band edge except that, as the upper band edge fell on a restricted band edge (as defined in section 15.205(a)), the limit for the restricted band was applied, i.e. the general limits defined in section 15.209(a).

Final measurements were performed on the worst-case configuration as described in part 15.31(i).
