3 EUT description

3.1 General description

The EUTs, outdoor units (ODU), models "BSR 900 MHz" and "SPRL 900 MHz", are part of a WipLL broadband fixed cellular wireless access system. The system provides a radio link between an end-user (a subscriber) and a network itself to give high-speed data access. The EUT is a hybrid system transceiver operating in 903 MHz to 927 MHz range, equipped with a 8 dBi gain internal antenna. The BSR is installed outside the base station site and typically is mounted on a pole, the SPRL is installed at the subscriber's premises. The SPRL is a radio transceiver that transmits and receives traffic to and from the base station (i.e., BSR), respectively. The SPRL provides subscribers with "always-on" Internet, high-speed data-only, or data and voice (VoIP) services and is configured with a unique BSR reference number, preventing the SPRL from relocating to another subscriber premises without authorization.
The SPRL has identical to the BSR chassis, the same dimensions, contains the same PCB components and differs only in the software.
The EUT is powered via a subscriber data adapter (SDA), which provides 48 V DC power.

3.2 EUT test configuration

Throughout testing the radio communication was established. The EUT operating frequencies generated by clocks and oscillators: 350 MHz - first IF, 6 MHz – second IF, [$F_{operating}$ + 350 MHz] – first LO, 356 MHz – second LO.

TEST PERFROMED IN:	Anechoic chamber, OATS
DATE of TEST:	October 14, 15, 2003
AMBIENT TEMPERATURE:	24°C
RELATIVE HUMIDITY:	38 %
AIR PRESSURE:	1012 hPa
OPERATING FREQUENCY RANGE:	903 -927 MHz
RATED RF OUTPUT POWER:	18 dBm
ANTENNA GAIN:	15.5 dBi
TEST DISTANCE	3 m
MEASUREMENT UNCERTAINTY:	± 4.3 dB

TEST PROCEDURE

The test was performed in anechoic chamber in 30 MHz – 5 GHz range. The EUT was placed on a wooden 80 cm height turntable. To find maximum radiation the turntable was rotated 360^{o}, measuring antenna height was changed from 1 to 4 m, and the antenna polarization was changed from vertical to horizontal.
