

RF Exposure Info for **Dell Wireless 360 Bluetooth Module**

RF Exposure Category: **Portable**

Measured Peak Conducted Output Power (mW) = 0.523

Peak Antenna Gain(dBi) = 0.5

Calculated EIRP (mW) = 0.587

Measured EIRP (mW) = 0.17

Low threshold for RF exposure evaluation $60/f(\text{GHz}) = 60 / 2.480 = 24.19\text{mW}$

Since both measured and calculated EIRP (mW) is below the low threshold above, no RF exposure evaluation is required.
