#### 1 General Information

#### 1.1 General Description

The equipment under test (EUT) is a superregenerative receiver for Roll Cage operating at 49.860 MHz which is controlled by a LRC circuit. The EUT is powered by 9.6 V rechargeable battery. When it received a forward or backward signal, it will going forward or backward. When it received a left or right signal, it will turn left or right.

The brief circuit description is listed as follows :

- Q4 and associated circuit act as superregenerative
- U1 and associated circuit act as receiver IC
- U2, Q24 and associated circuit act as decoder
- R7 and associated circuit act as oscillator for U1
- R12 and associated circuit act as oscillator for U2
- Q17-Q22 and associated circuit act as left motor control

### 2 Description of the radiated emission test

and Certification

#### 2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 -2001.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

A signal generator was used to radiate an unmodulated continuous wave (CW) signal to the EUT (superregenerative receiver) at its operating frequency in order to "cohere" the characteristic broadband emissions from the receiver.

#### 2.2 Test Result

The emissions meeting the requirement of section 15.109 are based on measurements employing the CISPR qusai-peak detector.

It was found that the EUT meet the FCC requirement.

### **3** Description of the Line-conducted Test

### 3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 - 2001. The EUT was setup as described in the procedures, and both lines were measured.

#### 3.2 Test Result

No measurement is required as the EUT is a battery-operated product.
