Subject: RE: FCC Equipment Authorization System (FCC ID: PIZMH9011)

Dear Timothy,

As per the requirement from FCC, please see the response below:

1. The frequency range for Base is 902.675 to 904.625MHz.  
for handset is 925.375 to 927.325.
2. Yes, the handset was tested in 3 orthogonal planes. And only worst case is presented at the report. (Also the photos shows the condition for worst case, too.)
3. After checking the test set-up photo, we did not see the condition you mentioned. Would you please check that for us again? Or we have to provide the photo to you again?
4. We also provide the RF board schematic at file attached for your reference. Please review it.

Would these response be ok? If need more info, please let me know. Thank you.

Have a nice day & Best Regards,

Julia/ Intertek Taiwan
