

RF Exposure

The antenna is mounted on a permanent outdoor structure and is professionally installed. Page 27 (First page of antenna installation instructions) of the users/installation manual has the following warning statement.

Antenna installation

WARNING! It is the responsibility of the installer to ensure that the antenna is mounted so that it is not accessible to the public and is not directed where dangerous levels of human exposure could result.

Due to the possibility of exposure to Radio Frequency (RF) radiation above the recommended levels, do not stand within five (5) feet of the front of the antenna during system operation.
