3.1 Test configuration without Domain Proxy

CPE-CBSD as UUT, BTS-CBSD direct communication.

3.2 Standards

[n.2]. WINNF-TS-0122 Version 1.0.2, "Conformance and Performance Test Technical Specification;
CBSD/DP as Unit Under Test (UUT)", 25 November 2020

[n.3]. WINNF-TS-0016 Version 1.2.7, "SAS to CBSD Technical Specification", 21 March 2022

3.3 Protocol test procedure

The test cases for SAS<->CBSD protocol in [n.2] apply for CPE-CBSD device type. Following the [n.1], when running the test cases in [n.2] for CPE-CBSD device type, verify that:

- 1. CPE-CBSD can begin transmitting its RF only after receiving radio signal from its compatible BTS-CBSD.
- 2. For all CPE-CBSD RF transmissions, the CPE-CBSD UUT radio frequency range and bandwidth are less or equal to the frequency range and bandwidth of its compatible BTS-CBSD.
- 3. Judging the last execution step appearing in [n.2] with "User data traffics" instead of "RF transmission."

3.4 Time test for getting Grant Procedure

Use the WInnForum SAS Harness run test case WINNF.FT.C.GRA.1. Without answering the last question in WINNF.FT.C.GRA.1 will keep UUT's grant request being rejected, then measure the time.

6. UUT register with the SAS irrespective of power levels

6.1 Test Procedure

- 1. Set the SAS test harness to grant UUT with the highest EIRP higher than 23 dBm.
- Check if UUT has successfully registered with SAS Test Harness, when operating EIRP less than 23 dBm.
- 3. After the UUT granted/authorized by the SAS, it can transmit with power less than the maxEIRP granted from SAS.

6.2 Result

The UUT can register with SAS under above operating conditions to meet the FCC criteria that the UUT will register with the SAS irrespective of power levels at which the device is set to operate – even below 23 dBm.

Note: The total offset 23.83 dB includes the antenna gain 10.1 dBi and cable path loss 13.73 dB.

Marker 1: The UUT successfully registered with SAS Test Harness, when operating 12.81 dBm EIRP.

Marker 2: After the UUT granted/authorized by the SAS, it can transmit with power less than the maxEIRP granted from SAS.

| 3610 | 20 | 25 | 4.06 | 5.90 | 10.1 | 18.12 |

Note 1: The total path loss is offset with 13.73 dB.

Note 2: The MaxEIRP Pi declared by manufactuer only supports one power level step, i.e. 25dBm/MHz as MaxEIRP. If any request from SAS to perform power control level change below 25dBm/MHz, the UUT would cease transmission immediately on the channel. Refer to Appendix B.2. for this characteristics verify.

Duty Cycle factor:

Note: The duty cycle value is 40.16%, add 10log(1/duty cycle) to the measured power level to compute the average power during continuous transmission.

The result below is provided as a means to ensure that evidence is provided showing compliance to this requirement.

This test is to verify if any request from SAS to perform power control level change below 25dBm/MHz, the UUT would cease transmission immediately on the channel

- 2. Ensure that the UUT has successfully registered with the SAS Test Harness, with cbsdld=C.
- 3. UUT sends valid Grant Request.
- 4. The SAS Test Harness sends a Grant Response message, which includes the following: cbsdld=C, responseCode=400.
- 5. Monitor the data transmission of the UUT from the start of the test until 60 seconds after the completion of Step 4.

B.2.2 Test Result
