History of this test report

Version	Description	Issued Date
01	Initial issue of report	Jul. 04, 2022

1. Introduction Section

FCC ID: PKRISGM3000A (parent model) and FCC ID: PKRISGM3100 (variant model) use the same identical internal printed circuit board layouts, while the variant model depopulates some LTE and NR band related components, details are available in the operational description. Based on their similarity, the FCC Part 96 (equipment class: CBE) reuse the original model's result and do spot-check, following the FCC KDB 484596 D01 v01. The spot check data in this report is used to justify the data reuse

The applicant should take full responsibility that the test data as referenced in this report represent compliance for this FCC ID: PKRISGM3100.

2. Model Difference Information

PKRISGM3000A and PKRISGM3100 use the identical internal printed circuit board layout, and the difference in the components population:

- PKRISGM3100: 4G-LTE Bands B29, B30, B71 related components are depopulated.
- PKRISGM3100: 5G FR1 Bands n7, n29, n30, n41, n70, n71 related components are depopulated.

The detail of similarity and difference is illustrated in the operational description, and based on the information spot check on conducted power and emission was performed for ensure compliance

3. Spot Check Verification Data Section

Conducted power test and radiated spurious emission test configurations were selected from the worst cases identified in the parent model and tested to demonstrate the test data from original model remains representative for the variant model.

Summary for RSE spot check is listed as below:

Test Item	Mode	ANT	PKRISGM3000A Parent Worst Result	PKRISGM3100 Variant Check Result	Difference (dB)
Radiated Spurious Emission (dBm)	WWAN LTE Band 48	4	-46.03	-40.45	5.58
	WWAN NR n48 SISO	4	-46.03	-45.51	0.52
	WWAN NR n48 MIMO	4+6	-49.92	-44.91	5.01

Conclusion:

Radiated spurious emission test against the variant model based on the worst-case condition from the original model was performed in this filing to demonstrate the test data from original model remains representative for the variant model.

The spot check emission level is within the margin to the limit, data referencing is justified.
