2.1033(c)(3) USER'S MANUAL

The necessary information is contained in a separate document.

2.1033(c)(4) TYPE OF EMISSIONS

The emission is QPSK using a 12 MHz radio channel, consequently the emission designator is 12M0G7D.

2.1033(c)(5) FREQUENCY RANGE

For the US the device operates in the frequency range of 2.500 GHz to 2.686 GHz.

2.1033(c)(6) OPERATING POWER

The unit is capable of operating with a single orthogonal spreading code at +22 dBm of PA output power, or with 2 simultaneous codes at +18 dBm of PA output power each, for a composite output power of +21 dBm. The two code case is the more severe case for testing the emission mask and thus is used for the emissions measurements.

The transmit power may be decreased from the above values in 2 dB steps on software control from the controlling base station. The range of output power decrease available by software control is 80 dB.

2.1033(c)(7) MAXIMUM POWER RATING

This unit is being qualified under the low power response station rules contained in both 47CFR21.908 (d) and 47CFR74.936 (f), which define the maximum power limit of -6 dBW EIRP in a 6 MHz channel.

This device operates in a 12 MHz channel and as such, the maximum EIRP allowed is -6 dBW + 3 dB = -3 dBW EIRP.

The design EIRP using the integrated antenna is as follows:

$$\begin{aligned} \text{EIRP} &= +22 \text{ dBm} + 2 \text{ dB (ant. gain)} \\ &= +24 \text{ dBm} \\ &= -6 \text{ dBW} \end{aligned}$$

Therefore the EIRP is 4 dB below the -3 dBW limit allowed for a 12 MHz bandwidth emission.

This device operates below the EIRP limit for a low power response station and is thus qualified using the emission mask defined for the lower power response station in both 47CFR74.936 (f) and 47CFR21.908 (d).

2.1033(c)(8) DC VOLTAGES

The necessary information is contained in a separate confidential document.

2.1033(c)(9) TUNE-UP PROCEDURE

This device does not have any tune up procedure, as it is a subscriber modem device that is configured at the factory to operate within the stated frequency and power limits.

2.1033(c)(10) SCHEMATICS AND CIRCUITRY DESCRIPTION

The schematics are included as confidential exhibits to the application. The complete description of the EUT circuitry and devices for determining and stabilizing frequency, for suppression of spurious radiation, for limiting modulation and for limiting power are given in the confidential exhibit titled "IPWireless" User Equipment Requirements and Architecture Document UERAD-V02.06 Model AP.

2.1033(c)(11) LABEL AND PLACEMENT

The necessary information is contained in a separate document.

2.1033(c)(12) SUBMITTAL PHOTOS

The necessary information is contained in a separate document.

2.1033(c)(13) MODULATION INFORMATION

Detailed information related to the digital modulation characteristics of the EUT are included in the confidential exhibit titled "IPWireless" User Equipment Requirements and Architecture Document UERAD-V02.06 Model AP.

The emissions mask for low power response stations was used to show compliance to 21.908(d) and 74.936(f). The output power of this device is less than the -6dBW requirement and therefore can be used. All measurements were made with a RBW=100kHz and using the relative method as specified in section 21.908(e).

Test Conditions:

The device was placed in continuous transmit mode and an Andrews Heliax shielded RF cable was connected directly to the Transmit port connector of the device and the other end to the HP-8564E spectrum analyzer RF input port. The device power supply was plugged into a variable AC transformer and a Digital Voltmeter monitored the AC input voltage to the device power supply. The voltage was varied from 85% to 115% of the nominal value of 120vac. The fundamental frequency was monitored on the spectrum analyzer. Temp: 20-deg Centigrade
