Operational Description

The Liquid Crystal Display Ripwave™-MX (LMX) dual-mode Modem is a user-friendly, easy-to-install device that helps you connect wirelessly to the Internet. It provides complete broadband Internet access to residential and small office/home office (SOHO) customers without the necessity of professional hardware installation. The LMX Modem also provides nomadic service availability as a computer with this device is moved from room to room, location to location, or even city to city as long as there is coverage in the area. The LMX modem utilizes TDD giving it a duty cycle of 50%.
