Fade Go

(Fig. 7) Fade Go Button in the Auto Cross Fade Mode

The only button user can use during the activation of Auto Cross-Fader is the <Fade Go> button. If you click the <Fade Go> button under the Auto Cross-Fader, then the playing song of the virtual turntable will be cross-faded compulsory to the another turntable right away according to the pre-set Auto Cross-Fading time.

Auto Cross-Fader is usually used when user is away for long time or when it is necessary to play many songs continuously and automatically according to the play list with the fixed cross fading time.   Therefore, it is limited for user to use all the functions under Auto Cross Fader mode.   For example, the stop or the play button is not available under this mode.   If user wants to use other buttons when it is under Auto Cross-Fader, user should change the mode to the Manual Cross Fader by clicking "Manual" button.

● Remix Record
And this virtual turntable window contains the re-mix recording part also.   Users can record and produce their own re-mix songs as wave file in real time.   So, if you want record your mixing and scratching(including effect pad, drum loop and etc.), click the red button for the record, and when the recording is finished, click the stop button and click the save button and type the name for the saved wave file.   Users can encode the MP3 file with this recorded wave file in order to make download and transfer easily on the web by using the appropriate program like Cool Edit.
