Hi Mike,

Here are our responses to the issues.

Question #1: This device is wireless keyboard with fundamental frequency of 27MHz. This wireless keyboard is powered with 2 AA batteries. With this understanding, in the test report, AC line conducted emission test was performed with emission plots. In addition, in the AC line conducted measurement procedure mentioned Bluetooth device. Please explain how this wireless keyboard will be connected to AC main. What is the Bluetooth function related to this device?

Our Response #1: We revise the test report (as attached). Please refer to it.

Question #2: In the test setup photo, photo 3 and 4 are labeled as AC line conducted setup photo. Please explain.

Our Response #2: We revise the test report (as attached). Please refer to it.

Question #3: What is the detector function used to measure the fundamental frequency ?

Our Response #3: "Peak detector" is used.

Question #4: Please confirm that loop antenna was used to measure radiated emission below 30MHz.

Our Response #4: Yes, we used the loop antenna.

Question #5: The user manual does not contain information required per section 15.21 of FCC rules. Please provide revised user manual to comply this requirement.

Our Response #5: The revised user manual is attached.

I hope the above response would conclude this case and receive your grant soon. Thank you.

Best Rgds,
WK
