

**ATCB ID: ATCB002806**

**Answers to questions of September 28, 2005**

**Attention: Dennis Ward**

**Answers:**

1. Exhibit 1 for the label is now uploaded. Please do not remove label from the external photo exhibit and please remove the label, placed by you, from the FCC ID label folder.
2. The main hot spot in the referred SAR plot is covered by the measurement grid and the color differences between the hot spots cannot be seen clearly. The Dasy4 SW is set to automatically find and measure secondary maxima greater than 0.5 W/kg and within 2dB of the primary maximum. We confirm that all the hot spots have been properly considered and accounted for.
