RE: FCC ID: PPIRM-70_ATCB002883
Attention: Dennis Ward

Following answers regarding your questions of October 24th, 2005:

1. Part 15B computer peripheral application

There was basic signalling between the phone and the computer activated during the tests.

2. Dwell time data is not typical of BT devices

Acknowledged - we will consider for future testing.

3. Manual

Manual was uploaded with file name "**RM-70_UG_Exhibit8_UserGuide.pdf**" but marked with wrong document category for internal photos.

4. IC application form – BT frequency range

Correct BT frequency range for IC application form should be 2402 to 2480MHz.
