

#14078 RC Gyro(49TX)

49.86MHz TRANSMITTER OPERATIONAL DESCRIPTION

The transmitter is a controller for a remote controlled toy car operating at 49.86MHz band. The transmitter is powered by a 9V battery and the transmitting frequency is crystal controlled. There are three buttons to control the forward / reverse motion, the direction of movement and the rotation of car. The operation is achieved by different combination of form modulating signal on the 49.86 MHz carrier frequency.
