Operational Description: PQTDORM15

The keyfob assembly consists of a plastic case with 4 button cutouts, a rubber button panel, and a PCB and battery. It generates an FSK encoded signal that is transmitted at 315MHz.

The keyfob uses an integrated RF MCU that detects button presses and calculates and transmits an encoded signal to a receiver. This signal is generated by an internal software controlled transmitter inside the MCU. It contains no external resonator. The antenna is integrated into the PCB.

| MODEL | DESCRIPTION | Buttons |
