

## Operation Instruction PQTDORM24 / 10735A-DORM24

The keyfob assembly consists of a plastic case with 4, 6, 5, and 3 button cutouts, a rubber button panel, a PCB and battery. It generates a Manchester encoded signal that is transmitted at 315MHz.

The keyfob uses an integrated RF MCU that detects button presses and calculates and transmits an encoded signal to a receiver. This signal is generated by an internal software controlled transmitter inside the MCU. It contains no external resonator. The antenna is integrated into the PCB.
