

## Operation Instruction PTQDORM32

The keyfob assembly consists of a plastic case 3,4,5 button cutouts, a rubber button panel, a PCB and battery. It generates a Manchester encoded signal that is transmitted at 315MHz.

The keyfob uses an integrated RF MCU that detects button presses and calculates and transmits an encoded signal to a receiver. This signal is generated by an internal software controlled transmitter inside the MCU. It contains no external resonator. The antenna is integrated into the PCB.
