5. Select "Connect Network Access"

- 6. A pass key is required to connect both Bluetooth enabled devices. (A pass key is needed to be set by either device in advance.) After your Bluetooth enabled device has been authenticated, your device will be able to share its Internet connection (if the device has Internet access) and files.
- 7. Once devices are paired, the authentication will not be required. (see page: What's Pairing?)

How to add Bluetooth to your Mac?

IMPORTANT INFORMATION TO MAC OS X USERS:

Bluetooth support for Mac OS X is still in development but will be supported natively with the full release of Mac OS X Version 10.2. As of now, the beta drivers for Bluetooth support can be downloaded from the Apple website at http://www.apple.com.

To enable Bluetooth on your Mac is as following:

- Download the Technology Preview 2 software from apple and install the software. (Double-click"Apple Bluetooth.pkg.")
- Plug in the Bluetooth USB Adapter to a available USB port on your PowerBook G4, iBook, PowerMac Ge or iMac (for the PowerMac G4 and iMac, you can attach the Bluetooth USB adapter to a free USB port on your keyboard).
- Launch the Bluetooth software to find Bluetooth enabled devices within range of your computer to pair with.
- 4. Select the Bluetooth device on the list and click the Pair button.
- 5. Now, you are connected.

Please refer to the Apple website for further information on Bluetooth support and updates at http://www.info.apple.com
