

Brief description of the circuit □

Model: MH1170 series

Microwave oven connect to the power, when the door is closed, All interlock switch worked, the electronic control system get power. It control the power inverter work and provide the power to Magnetron, then Magnetron will work and produce 2450MHz microwave to the cavity of microwave oven.

At the same time, Electronic control system will control the cavity lamp, turntable motor , cooling fan motor, hood exhaust fan motor, Grill Tube, Heat element and hood lamp according program.
