Mike,

The radio will be limited to 2503-2683 MHz. As such, the frequency range to apply is

**2507.5 - 2679 MHz, based on the lowest and highest post-transition channel assignments:**

EBS Channel A2: 2507.5–2513 MHz  
BRS Channel G1: 2673.5–2679 MHz

Please proceed with your review.

Thanks and best regards

Tom

Question #1: The operating frequency range indicated in the test report and application form is from 2503 - 2683 MHz. Part 27 is channelized spectrum. The frequency range indicated can not match the channel allocated in various band. Please provide the specific rule part and section number that this device is designed to be operated.

Technical review will continue after receiving your reply to question #1.

Best Regards

Mike Kuo

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence
