Certificate of Compliance

Test Report No.:	SKTOS-01105		
NVLAP CODE :	200220-0		
Applicant:	Guardtec, Inc.		
Applicant Address:	6F, Sungwon Bldg., 1008-4, Daechidong, Kangnamgu, Seoul, Korea		
Product:	COMGUARD		
FCC ID:	PTXCG-P100	Model No.:	CG-P100
Receipt No.:	SKE20010720-568	Date of receipt:	July 20, 2001
Date of Issue:	Aug. 14, 2001		
Testing location:	SK TECH CO., LTD. 820-2, Wolmoon-Ri, Wabu-Up, Namyangju-Si, Kyunggi-Do, Korea		
Test Standards:	ANSI C63.4 / 1992		
Rule Parts:	FCC part 15 Subpart B		
Equipment Class :	Class B Digital Device Peripheral		
Test Result:	The above mentioned product has been tested and passed.

1. General

This equipment has been shown to be capable of compliance with the applicable technical standards and was tested in accordance with the measurement procedures as indicated in this report.

We attest to the accuracy of data. All measurements reported herein were performed by SK Tech Co., Ltd. and were made under Chief Engineer's supervision.

We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

2. Test Site

SK TECH Co., Ltd.

2.1 Location

820-2, Wolmoon Ri, Wabu-Up, Namyangju-Si, Kyunggi-Do, Korea

The test site is in compliance with ANSI C63.4/1992 for measurement of radio interference.

2.2 List of Test and Measurement Instruments

Table 1 : List of Test and Measurement Equipment

- **Conducted Emissions**

Kind of Equipment	Type	S/N	Calibrated until
EMI Receiver	ESHS 10	862970/019	02.2002

3. Description of the tested samples

The EUT is the COMGUARD.

3.1 Rating and Physical Characteristics

- **Board Specification**

- 1) CPU : AT89C51
8Bit micro controller, 4Kbyte Program Memory, 128x8bit Internal Ram
- 2) Sensor Input (3 Input) : Normal Close 2 Input, Normal Open 1 Input
- 3) Vibration sensor Input (1 Input) : Sensitivity control volume : VR1
- 4) RF remote control receiver : Receiving remote control data and Reading data
- 5) Communication Port : Communicates through PC and PCI-Bus, does system setup for PC and transfers. System condition of the machine
- 6) Battery Backup : 12V/400mA
Maintains normal operation for 3hours in case of power failure
Built-in circuit against overcharge and over discharge
- 7) Power Supply unit : DC 18V/500mA Adapter
- 8) PC power monitor
Monitors PC power modes, on/off and operates following the system mode
- 9) AC power monitor : Monitors AC power failure and transfers the condition PC
- 10) Weight : 190g

- **Adapter Specification**

- 1) Input voltage : AC 110/220V, 60Hz
- 2) Output voltage : 18V (DC)
- 3) Output current : 500mA
- 4) Maximum rated capacity : 60VA
- 5) Dimensions : 550mm x 800mm x 470mm

- **Remote Control Specification**

- 1) Used frequency : 304MHz (single channel)
- 2) Used voltage : 12V DC
- 3) Used current : Below 15mA
- 4) Transmission Output : Below 5mW
- 5) Frequency stability : Below \pm 100KHz

3.2 Submitted Documents

N/A

4. Measurement Conditions

The operating voltage of EUT is DC 18V supplied by the adaptor.
 (The Adaptor Input Voltage is AC 120V, 60Hz)

4.1 Modes of Operation

The EUT was in the following operation mode during all testing;
 The EUT installed in the PC and connected with the sensors.
 Tested in mode of sensing movement & magnet. .

4.2 List of Peripherals

Description	Manufacturer	Model Name	Serial No.	FCC ID
Monitor	View Tech	VT-1411	N/A	N/A
Keyboard	Jing Mold	LKB-0107	90602477	N/A
Mouse	Logitech	M-S48a	LZH04608022	DoC
Adaptor 1	N/A	48-18-500D	N/A	N/A
Adaptor 2	LI SHIN International Enterprise	LSE9802B1240	2K1711039	N/A
Personal Computer				
Mother board	Micro-Star	MS-6161	96K6262664G1144716	DoC
Power supply	HIPRO	HP-235ATXA6	F3-9911252206	DoC
FDD Drive	Panasonic	JU-257A604P	62638	DoC
HDD	Quantum	Pro Drive LPS	9442203B	DoC
CD-ROM Drive	LG	GCD-R560B	6023002365	BEJGCD-R560B

4.3 Type of Used Cables

Description	Length	Type of shield	Manufacturer	Remark
PC power cable	1.6m	Non-Shield	None	
Monitor Power cable	1.8m	Non-Shield	View Tech	
VGA cable	1.8m	Shield	None	
Keyboard interface cable	1.8m	Shield	Jing Mold	
Mouse interface cable	1.0m	Shield	Logitech	
Adaptor 1 cable	1.9m	Non-Shield	N/A	For EUT
Adaptor 2 cable	2.1m	Non-Shield	N/A	For Monitor

4.4 Test Setup

The test setup photographs showed the external supply connections and interfaces.

4.5 Uncertainty

1) Radiated disturbance

U_c (Combined standard Uncertainty) = $\pm 1.9\text{dB}$

Expanded uncertainty $U = KU_c$

$K = 2$

$\therefore U = \pm 3.8\text{dB}$

2) Conducted disturbance

$U_c = \pm 0.88\text{dB}$

$U = KU_c = 2xU_c = \pm 1.8\text{dB}$

5. EMISSION Test

5.1 Conducted Emissions

Result:**Pass**

The line-conducted facility is located inside a 2.0M x 3.6M x 7.2M shielded enclosure.

The shielding effectiveness of the shielded room is in accordance with MIL-Std-285 or NSA 604-05.

A 1m x 1.5m wooden table 80cm. high is placed 40cm. away from the vertical wall and 1.5m away from the side wall of the shielded room. ROHDE & SCHWARZ Model ESH3-Z5 (10kHz-30MHz) 50ohm/50 uH Line-Impedance Stabilization Networks(LISNs) are bonded to the shielded room.

The EUT is powered from the ROHDE & SCHWARZ LISN and the support equipment is powered from the ROHDE & SCHWARZ LISN. Power to the LISNs are filtered by a high-current high-insertion loss Lindgren enclosures power line filters (100dB 14kHz-10GHz).

The purpose of the filter is to attenuate ambient signal interference and this filter is also bonded to the shielded enclosure.

All electrical cables are shielded by braided tinned copper zipper tubing with inner diameter of 1/2".

If the EUT is a DC-powered device, power will be derived from the source power supply it normally will be powered from and this supply lines will be connected to the ROHDE & SCHWARZ LISN.

All interconnecting cables more than 1 meter were shortened by non-inductive bundling (serpentine fashion) to a 1-meter length.

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. The RF output of the LISN was connected to the spectrum analyzer to determine the frequency producing the maximum EME from the EUT.

The spectrum was scanned from 450kHz to 30MHz with 100msec. sweep time.

The frequency producing the maximum level was reexamined using EMI/field Intensity Meter (ESHS 10) and Quasi-Peak adapter. The detector function was set to CISPR quasi-peak mode.

The bandwidth of the receiver was set to 10kHz. The EUT, support equipment, and interconnecting cables were arranged and manipulated to maximize each EME emission.

Each emission was maximized by: switching power lines; varying the mode of operation or resolution; clock or data exchange speed; if applicable; whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of conducted test.

Each EME reported was calibrated using self-calibrating mode.

25.58	21.71	A	0.6	0.7	23.01	48.0	24.99

NOTES:

1. All modes of operation were investigated and the worst-case emission are reported.
2. All other emissions are non-significant.
3. All readings are calibrated by self-mode in receiver.
4. Measurements using CISPR quasi-peak mode.
5. Line A = LINE-PE, Line B = NEUTRAL-PE
6. C/F = Correction Factor
7. C/L = Cable Loss

◆ **Margin Calculation**

$$(6)\text{Margin} = (5)\text{Limit} - (4)\text{Actual}$$

$$[(4)\text{Actual} = (1)\text{Reading} + (2)\text{C/F} + (3)\text{C/L}]$$

5.2 Radiated Emissions

Result :**Pass**

Preliminary measurements were made indoors at 1 meter using broadband antennas, broadband amplifier, and spectrum analyzer to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The system configuration, clock speed, mode of operation or video resolution, turntable azimuth with respect to the antenna were noted for each frequency found. The spectrum was scanned from 30 to 300 MHz using biconical antenna and from 300 to 1000 MHz using log-periodic antenna. Above 1GHz, linearly polarized double ridge horn antennas were used.

Final measurements were made outdoors at 3-meter test range using SCHWARZBECK dipole antennas. The test equipment was placed on a wooden table situated on a 4x4 meter area adjacent to the measurement area. Turntable was to protect from weather in the dome that made with FRP. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined and investigated using EMI/Field Intensity Meter(ESVS 10) and Quasi-Peak Adapter. The detector function was set to CISPR quasi-peak mode and the bandwidth of the receiver was set to 100kHz or 1MHz depending on the frequency or type of signal.

The half-wave dipole antenna was tuned to the frequency found during preliminary radiated measurements. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the maximum emission for the frequency and were placed on top of a 0.8-meter high non-metallic 1 x 1.5 meter table.

The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each EME emission. The turntable containing the system was rotated; the antenna height was varied 1 to 4 meters and stopped at the azimuth or height producing the maximum emission. Each emission was maximized by: varying the mode of operation or resolution; clock or data exchange speed, and/or support equipment, if applicable; and changing the polarity of the antenna, whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of radiated emission test. Each EME reported was calibrated using self-calibrating mode.

Table 3 : Test Data, Radiated Emissions

Frequency (MHz)	Pol.	Height [m]	Angle [°]	(1) Reading (dBμV)	(2) AFCL (dB/m)	(3) Actual (dBμV/m)	(4) Limit (dBμV/m)	(5) Margin (dB)
158.00	H	1.4	219	11.8	17.2	29.0	43.5	14.5
194.00	H	1.0	168	16.3	18.4	34.7	43.5	8.8
