

Dear Wei Li,

You are listed as the Technical Contact for the above referenced TCB application. The following items need to be resolved before the review can be continued:

1. The Users Manual submitted does not contain any instructions in English (apparently page 9 of 10 was submitted). Please provide the English Language portion of the manual.

A: Please see attached English Manual: 16chxmit.pdf

2. The Test Report page 4 states that the applicant is Somfy Systems, Inc., but the application is being submitted for SIMU U.S., Inc. Please confirm that this is correct.

A: Please see attached revised report

3. This device is called a 16 channel transmitter, but there does not seem to be a description of how channels are changed and how they differ from each other (is it a change of frequency or modulation?).

A: Please see file, 16chxmit Sec 3: Section 3 describes how to change the channels. Of course the different channels are not a change of the frequency but just a change of the logic signal coding.

4. Manually operated devices (button press) that operate in accordance with FCC 15.231(a) are required to cease transmission within 5 seconds of release of the button. The operational description describes the 136msec frame, but does not indicate compliance with the transmission cease time of 5 seconds. Please also confirm that this device only transmits upon pressing of a button (manual operation). Please confirm compliance with this timing requirement.

A: The transmission does stop when the button is released after the completion of the frame. This time is well under 1 second much less 5 seconds.

The report page 9 is also revised with this information.

Best regards,

Chris Harvey
